\*Due to changes in accounting procedures, data for April 1986 and subsequent months are not strictly comparable with those for earlier periods. In particular, unemployment insurance contributions before April 1986 are included in Specified Purpose Accounts.

†Fiscal year totals are from the audited Public Accounts of Canada, while monthly data are from the unaudited "Statement of Financial Operations" published in the Canada Gazette. The sum of the monthly data for a fiscal year is likely to differ from the annual totals taken from the Public Accounts.

\*A cause des modifications apportées aux méthodes comptables, les chiffres d'avril 1986 et des mois suivants ne sont pas tout à fait comparables à ceux des périodes précédentes. Il est à noter que les cotisations versées à l'assurance-chômage avant avril 1986 figurent sous la rubrique des Comptes à fins déterminées. Les données de l'exercice financier sont tirées des comptes publics du Canada, tandis que les données mensuelles sont tirées de l'énoncé des opérations financières, qui est publié dans la Gazette du Canada. Sans la sanction du Vérificateur général, il est fort probable que les sommes des données mensuelles d'un même exercice diffèrent des chiffres annuels tirés des comptes publics.

Special features of a number of issues are as follows:

- (a) This item represents the cancellation of securities held by purchase funds.  
 (b) Callable after 15 September 1996.  
 (c) On 18 March 1975 the Government of Canada announced that the 3% perpetual bonds will be redeemed at par on 15 September 1996.  
 (d) Callable after 1 April 1988.  
 (e) Canadair debt assumed by the Government of Canada; the 12½% notes were originally issued on November 15, 1982 and the 8½% notes on April 26, 1982.  
 (f) This item represents the cancellation of securities held by Securities Investment Account.

Les renvois ci-dessous indiquent les particularités de certaines émissions :

- (a) Annulation de titres détenus par le fonds de rachat.  
 (b) Remboursables par anticipation après le 15 septembre 1996.  
 (c) Le 18 mars 1975, le gouvernement canadien a annoncé que les rentes perpétuelles 3% seront remboursées à leur valeur nominale le 15 septembre 1996.  
 (d) Remboursables par anticipation, après le 1<sup>er</sup> avril 1988.  
 (e) La dette de Canadair a été assumée par le gouvernement canadien; les billets 12½% avaient été émis le 15 novembre 1982 et les billets 8½% le 26 avril 1982.  
 (f) Annulation de titres détenus par la Caisse de placements.

\*Users of these measures of capacity utilization are advised to refer to the discussion of them in the May 1980 issue of this Review "Measuring Capacity Utilization: A Technical Note". Particular attention should be paid to the discussion of how the data are to be evaluated and interpreted.

\*Les utilisateurs des données des taux d'utilisation des capacités sont invités à se référer à l'étude qui a été publiée sur ce sujet dans la Revue de mai 1980 sous le titre : « Les méthodes d'estimation des taux d'utilisation des capacités ». Il convient d'accorder une attention particulière à l'analyse de la façon dont il faut évaluer et interpréter ces données.

\*Starting in January 1987, data taken from the Survey of Employment, Payroll and Hours are not strictly comparable with those for earlier months because of improvements in sampling methodology. Adjustment factors to calculate growth rates across this statistical break are available from Statistics Canada.

\*Les données extraites de l'Enquête sur l'emploi, la rémunération et les heures de travail ne sont plus, depuis janvier 1987, tout à fait comparables à celles des mois précédents, en raison d'améliorations apportées à la méthode d'échantillonnage. Il est possible de se procurer, auprès de Statistique Canada, les facteurs de correction permettant d'obtenir des taux de croissance comparables pour les séries antérieures et postérieures à janvier 1987.

\*Starting in January 1987, data taken from the Survey of Employment, Payroll and Hours are not strictly comparable with those for earlier months because of improvements in sampling methodology. Adjustment factors to calculate growth rates across this statistical break are available from Statistics Canada.

\*Les données extraites de l'Enquête sur l'emploi, la rémunération et les heures de travail ne sont plus, depuis janvier 1987, tout à fait comparables à celles des mois précédents, en raison d'améliorations apportées à la méthode d'échantillonnage. Il est possible de se procurer, auprès de Statistique Canada, les facteurs de correction permettant d'obtenir des taux de croissance comparables pour les séries antérieures et postérieures à janvier 1987.

# Notes to the tables

## Cansim-Databank identification numbers

Many of the time series published in the Review are available from Statistics Canada in machine-readable form, for use on computers, or in print-outs. Each time series of annual, quarterly, monthly or weekly data on the Cansim system (Canadian Socio-Economic Information Management) has an identification number. A variety of prefixes identify the series maintained by Statistics Canada (e.g. D1432, P484000), while those maintained by the Bank of Canada have a B prefix (e.g. B318), and those maintained by Canada Mortgage and Housing Corporation have a H prefix (e.g. H48). The identification number is given as a reference at the top of each column of data and refers to the series of weekly, monthly or quarterly data in that column. Where the frequency of a series as it is available on Cansim is different from that shown in the table or where a combination of quarterly and monthly data is shown in the table, the frequency of the Cansim series is indicated by a superscript M if monthly or by a superscript Q if quarterly. Current and revised data are entered into Cansim immediately on release.

## Weekly series

The tables in the Review do not cover a full year of weekly data. For all Wednesday series, in the event a holiday falls on a Wednesday, data for the preceding business day will be shown. Figures for weekly series for which the Bank of Canada is the source are available on request to the Department of Monetary and Financial Analysis, Bank of Canada, Ottawa K1A 0G9.

## Notes to the tables

The reference notes to the statistical tables in the Review, which prior to 1981 were included in each monthly issue, are now printed under a separate cover. The separate section of notes will be updated and reprinted as necessary. Additional copies of the explanatory notes may be obtained by writing to the Bank of Canada Review, Public Information Division, Secretary's Department, Bank of Canada, Ottawa K1A 0G9. The latest note supplement is dated January 1989.

This section of the monthly Review will include only revisions to the notes as may be required to keep them current for users of the statistical tables, as well as the reference notes pertaining to tables that are published only occasionally in the Review.

# Notes relatives aux tableaux

## Cansim - Numéros de référence des séries de Databank

Nombre des séries chronologiques publiées dans la Revue peuvent être obtenues de Statistique Canada sous une forme directement exploitable par ordinateur ou sous la forme d'imprimés. Elles font partie intégrante du fichier Cansim<sup>1</sup>, dont chaque série chronologique - annuelle, trimestrielle, mensuelle ou hebdomadaire - est identifiée par un numéro de référence. Les numéros des séries élaborées par Statistique Canada sont précédés de diverses lettres (par exemple : D1432, P484000), ceux des séries de la Banque du Canada, de la lettre «B» (par exemple : B318) et ceux de la Société canadienne d'hypothèques et de logement, de la lettre «H» (par exemple : H48). Dans nos tableaux, le numéro apparaît en tête de la colonne et identifie la série hebdomadaire, mensuelle ou trimestrielle qui figure dans la colonne; lorsque les fréquences de données figurant au fichier Cansim et dans un tableau de la Revue diffèrent ou que le tableau comporte à la fois une série mensuelle et une série trimestrielle, la fréquence de la série Cansim est indiquée par la lettre «M» si la série est mensuelle et par la lettre «Q» si elle est trimestrielle.

<sup>1</sup> Ce sigle est une abréviation de *Canadian Socio-Economic Information Management System* - Système canadien de traitement des données socio-économiques

## Séries hebdomadaires

Dans les tableaux de la Revue, les séries de données hebdomadaires ne couvrent pas une année entière. Lorsque le mercredi est un jour férié, les statistiques du mercredi sont établies à partir des données du jour ouvrable précédent. On pourra obtenir les données provenant de la Banque du Canada en s'adressant au département des Études monétaires et financières, Banque du Canada, Ottawa K1A 0G9.

## Notes relatives aux tableaux

Les notes relatives aux tableaux de la Revue, qui jusqu'à la fin de 1981 étaient reproduites dans chaque livraison, sont désormais imprimées séparément. Elles seront mises à jour et publiées au besoin. Ceux qui désirent recevoir d'autres exemplaires des notes sont priés de s'adresser à la Revue de la Banque du Canada, Section de l'information, Secrétariat, Banque du Canada, Ottawa K1A 0G9. Le plus récent supplément a été produit en janvier 1989.

La présente section de la Revue ne contiendra que les mises à jour essentielles à l'interprétation des statistiques et les notes se rapportent aux tableaux publiés à des fréquences variables dans la Revue.

## A1

As a result of a rebasing of the national accounts, lines 10-15 on page 3 of the Notes should now read:

- 10 Gross domestic product at constant (1986) prices (Table H3)
- 11 Gross domestic product by industry; at constant 1986 prices (Table H5)
- 12 Industrial production; at constant 1986 prices (Table H13)
- 13 Manufacturing production; at constant 1986 prices (Table H5)
- 14 Gross national expenditure implicit price index; 1986=100 (Table H4)
- 15 Consumer price index excluding food; 1986=100 (Table H11)

## D1-D2

Sources: Bank of Canada, Statistics Canada

Data on Table D1 are derived from total trust and mortgage loan company data collected quarterly by Statistics Canada (available in "Financial Institutions," Catalogue No. 61-006) and from a monthly survey by the Bank of Canada of companies that, at the end of September 1989, represented over 80 per cent of total assets in these industries. For months between quarter-ends, financial items on Table D1 are estimated individually from this survey to obtain aggregate data for the industry. As a result, for these months, total assets may not equal total liabilities, as they are the sums of the component series. Where there are foreign currency assets or liabilities these are included in the relevant component series. Data for the mortgage subsidiaries of the chartered banks appearing on Table D2 originate directly from the monthly survey by the Bank of Canada. On 25 January 1988 the Laurentian Group, which included Eaton-Bay Financial Services, restructured its assets and liabilities among three companies: Laurentian Bank, Laurentian Trust and Laurentian Bank of Canada Mortgage Corporation. As a result, total assets and liabilities of trust and mortgage loan companies were reduced by \$207 million, representing the amount of assets and liabilities allocated to the Laurentian Bank from Eaton-Bay Trust.

• *Cash and gross demand and notice deposits* include deposits placed in chartered banks and other financial institutions in Canada and abroad. • *Items in transit* represent the net balance of all items in the course of settlement. • *Term deposits* include swapped deposits at chartered banks and deposits at institutions other than chartered banks. • *Other short-term paper and bankers' acceptances* include notes issued by sales finance companies and provincial and municipal treasury bills and short-term notes. • *Canadian bonds* are bonds, debentures and notes with an original term to maturity of one year or more. • *Personal loans* comprise both secured and unsecured loans. Beginning in December 1989, this series also includes loans to unincorporated businesses and non-profit organizations. • *Other loans* include secured loans placed with investment dealers as well as other collateral and unsecured loans; they also include farm loans.

• *Other assets* comprise other investments in Canada as well as investments in institutions and corporations outside Canada, investments in and claims on parent, subsidiary and affiliated companies, accounts receivable and accrued revenue, fixed assets, real estate and other assets, less accumulated provisions for losses on loans and investments.

• *Daily interest deposits* include only those deposits held by companies surveyed by the Bank of Canada. • *Personal deposits* include deposits by individuals, unincorporated businesses and non-profit institutions. • *Tax-exempt deposits* include RRSPs, RHSPs and other tax-sheltered funds placed in savings and term deposits. • *Promissory notes and debentures* include promissory notes, subordinated notes and debentures issued under trust indenture. • *Other liabilities* consist of debt owing to parent, subsidiary and affiliated companies, accounts payable and accrued liabilities, corporation income taxes payable, deferred income, mortgages payable, deferred income taxes and other liabilities.

## A1

L'année de base retenue dans les comptes nationaux ayant été modifiée, les lignes 10-15 de la page 3 des Notes aux tableaux devraient maintenant se lire comme suit :

- 10 Produit intérieur brut à prix constant (1986) (Tableau H3)
- 11 Produit intérieur brut par branche d'activité à prix constants (1986) (Tableau H5)
- 12 Production industrielle à prix constants (1986) (Tableau H13)
- 13 Production manufacturière à prix constants (1986) (Tableau H5)
- 14 Dépense nationale brute; indice synthétique des prix; 1986=100 (Tableau H4)
- 15 Prix à la consommation, alimentation exclue; 1986=100 (Tableau H11)

## D1 et D2

Source : Banque du Canada et Statistique Canada

Les données qui figurent au Tableau D1 sont tirées de l'ensemble des données des sociétés de fiducie ou de prêt hypothécaire, recueillies tous les trimestres par Statistique Canada (publiées dans *Institutions financières*, catalogue n° 61-006) et d'une enquête mensuelle menée par la Banque du Canada auprès d'un échantillon de sociétés de fiducie ou de prêt hypothécaire qui, à la fin de septembre 1989, détenaient plus de 80 % de l'actif de ce secteur. Pour ce qui est des mois qui ne coïncident pas avec une fin de trimestre, les chiffres des postes financiers figurant au Tableau D1 sont estimés au cas par cas à partir des données de l'enquête mensuelle pour obtenir les données globales du secteur. En conséquence, le total des actifs pour les mois en question peut ne pas être égal au total des éléments du passif correspondant, puisqu'il résulte de l'addition des chiffres de chacun des éléments de la série visée. Les avoirs et engagements en monnaies étrangères sont inclus le cas échéant dans chacune des séries correspondantes. Les données des filiales hypothécaires des banques à charte, qui figurent au Tableau D2, sont tirées directement de l'enquête mensuelle de la Banque du Canada. Le 25 janvier 1988, le groupe financier de la Laurentienne, qui comprenait les Services financiers Eaton-Baie, a réparti ses avoirs et engagements entre trois sociétés : la Banque Laurentienne du Canada, le Trust La Laurentienne du Canada Inc. et la Société d'hypothèque Banque Laurentienne du Canada. Par conséquent, les avoirs et les engagements totaux des sociétés de fiducie ou de prêt hypothécaire ont accusé une baisse de 207 millions de dollars, montant qui représentait la part des avoirs et engagements du Trust Eaton-Baie allouée à la Banque Laurentienne du Canada.

• *L'encaisse, les montants bruts des dépôts à vue et les dépôts à préavis* comprennent les dépôts confiés aux banques à charte et aux autres institutions financières au Canada et à l'étranger. • *Les effets en cours de compensation* représentent le solde net de tous les effets en cours de règlement.

• *Les dépôts à terme* comprennent les dépôts swaps dans les banques à charte et les dépôts dans les institutions autres que les banques à charte. • *Le poste autre papier à court terme et acceptations bancaires* comprend les billets émis par les sociétés de financement, les bons du Trésor émis par les provinces ou les municipalités et les billets à court terme. • *Obligations canadiennes*. Ce poste comprend les obligations, les débetures et les billets dont l'échéance est de un an ou plus. • *Les prêts aux particuliers* comprennent les prêts garantis ou non garantis. Depuis décembre 1989, cette série comprend également les prêts aux entreprises non constituées en sociétés et aux sociétés à but non lucratif. • *Les autres prêts* comprennent les prêts garantis accordés aux courtiers en valeurs mobilières de même que les autres prêts sur nantissement et les prêts non garantis; ils comprennent également les prêts agricoles. • *Les autres éléments de l'actif* comprennent les autres placements au Canada et les placements dans les institutions et les sociétés constituées à l'étranger, les placements dans les sociétés mères ou les créances sur celles-ci, les filiales et les sociétés affiliées, les comptes-clients, les produits constatés par régularisation, les immobilisations, les biens immobiliers et autres avoirs, moins le montant cumulé des provisions pour pertes sur prêts et sur placements.

• *Le poste dépôts à intérêt quotidien* ne comprend que les dépôts détenus par les sociétés comprises dans l'enquête de la Banque du Canada. • *Les dépôts des particuliers* comprennent les dépôts des particuliers, ceux des entreprises non constituées en sociétés et ceux des sociétés à but non lucratif. • *Les dépôts exempts d'impôts* comprennent les REER, les REEL et autres fonds non imposables placés sous forme de dépôts d'épargne et de dépôts à terme. • *La rubrique billets à ordre et débetures* comprend les billets à ordre, les billets subordonnés et les débetures émises en vertu d'un acte fiduciaire. • *Les autres éléments du passif* se composent des sommes dues aux sociétés mères, aux filiales et aux sociétés affiliées, les comptes-fournisseurs et les charges à payer, les impôts à payer sur le revenu des sociétés, les revenus différés, les emprunts hypothécaires, les impôts sur le revenu différés et les autres engagements.

## H5

Source: Statistics Canada

Data are obtained from the Statistics Canada monthly publication "Gross Domestic Product by Industry," Catalogue 15-001 and are generally compiled according to the 1980 Standard Industrial Classification. The industry groups—mines, quarries and oil wells, manufacturing, and other utilities—are the component parts of industrial production.

• The *business sector* includes all enterprises that operate for gain. • The *non-business sector* consists primarily of government services, educational services and hospitals and related health and social services.

## H11

Source: Statistics Canada

Data are obtained from the Statistics Canada publication "The Consumer Price Index," Catalogue 62-001. Beginning in January 1989 the weights used in constructing the index are based on 1986 consumer expenditure patterns, replacing the 1982 weights used from January 1985. Three earlier reweightings occurred, in April 1982 incorporating 1978 expenditure patterns, in October 1978 using 1974 weights and in May 1973 using 1967 weights. In July 1990, with the release of the June 1990 consumer price index, the time base was changed in a purely arithmetic operation from 1981 to 1986=100. Further information on these revisions, as well as on the concepts and methodology, may be obtained from Statistics Canada publications. Effective with the release of the January 1985 numbers Statistics Canada revised the definition of the shelter component to include both goods and services. A consistent historical series was provided back to September 1978.

The percentage changes shown in Column 15 of Table A1 are the rates published by Statistics Canada in Catalogue 62-001.

## H12

Sources: Statistics Canada, Labour Canada

• *Labour income, wages and salaries and profits per unit of output* have been calculated by the Bank of Canada from Statistics Canada data. Labour income per unit of output is obtained by dividing total labour income including military pay and allowances by GDP (in constant 1986 dollars). Non-farm commercial wages and salaries per unit of output are obtained by dividing total wages and salaries less wages and salaries in agriculture, fishing, trapping, public administration and non-commercial services by GDP for the commercial non-farm sector.

Manufacturing wages and salaries per unit of output are obtained by dividing manufacturing wages and salaries by gross manufacturing output. Non-farm commercial profits per unit of output are obtained by dividing corporate profits incorporated as a component of GDP by GDP for the commercial non-farm sectors. Except for the last calculation, GDP for the non-farm and commercial non-farm sectors excludes fishing and trapping.

## H13

Sources: Statistics Canada, Labour Canada

• *Retail trade* figures refer to aggregate sales by retail outlets; direct sales to consumers that bypass the retail outlet are not included. In the table, sales of recreational and motor vehicle dealers have been subtracted from total retail sales.

## H5

Source : Statistique Canada

Ces données sont tirées de la publication mensuelle de Statistique Canada intitulée «Produit intérieur brut par industrie», n° de catalogue 15-001; elles sont généralement établies d'après la Classification type des industries de 1980. La production industrielle englobe les secteurs suivants : mines, carrières et puits de pétrole, fabrication et services d'utilité publique.

• Le *secteur des entreprises* comprend toutes les entreprises à but lucratif. • Le *secteur non commercial* comprend principalement les services publics, les établissements d'enseignement, les hôpitaux ainsi que les services de santé et les services sociaux connexes.

## H11

Source : Statistique Canada

Les données proviennent de la publication de Statistique Canada intitulée «L'indice des prix à la consommation» (n° 62-001 au catalogue). À compter de janvier 1989, les pondérations qui servent au calcul de l'indice sont fondées sur la structure des dépenses de 1986 et remplacent les pondérations de 1982, qui étaient utilisées depuis janvier 1982. Les pondérations avaient été révisées à trois reprises auparavant, soit en avril 1982 pour tenir compte de la structure des dépenses de 1978, en octobre 1978 pour tenir compte de la structure des dépenses de 1974 et en mai 1973 pour tenir compte de la structure des dépenses de 1967. En juillet 1990, après publication des données de l'indice des prix à la consommation pour juin 1990, l'ancienne année de base, soit 1981, a été remplacée par 1986; les opérations effectuées ont été purement arithmétiques. On trouvera dans les publications de Statistique Canada de plus amples renseignements sur ces révisions ainsi que sur les concepts et la méthodologie utilisés. La publication des données de janvier 1985 a coïncidé avec la révision par Statistique Canada de la définition du logement; la nouvelle définition de cette composante englobe à la fois des biens et des services. La série chronologique utilisant cette définition remonte à septembre 1978.

Les taux de variation reproduits à la colonne 15 du Tableau A1 sont extraits de la publication n° 62-001 de Statistique Canada.

## H12

Sources : Statistique Canada, Travail Canada

• Le *revenu du travail* et les *bénéfices par unité produite* ont été calculés par la Banque du Canada à partir des données de Statistique Canada. Pour calculer les gains des ouvriers par unité produite, on a divisé l'ensemble des gains des employés (solde et allocations des militaires comprises) par le PIB en dollars de 1986. Les salaires et traitements par unité produite dans les entreprises non agricoles sont calculés en divisant l'ensemble des salaires et traitements moins les salaires et traitements versés aux employés dans l'agriculture, la pêche, le piégeage, l'administration publique et les services non commerciaux par la production brute du secteur. Les salaires et traitements par unité produite des ouvriers dans les industries manufacturières sont calculés en divisant les salaires et les traitements payés dans ces industries par la production brute de celles-ci. Les bénéfices par unité produite des entreprises commerciales, agriculture exclue, sont calculés en divisant le montant global des bénéfices de ces entreprises, qui figure dans le PIB, par leur production brute. Exception faite du dernier calcul, la production brute du secteur non agricole et des entreprises commerciales non agricoles exclut la pêche et le piégeage.

## H13

Sources : Statistique Canada, Travail Canada

• Le *commerce de détail* comprend l'ensemble des ventes des détaillants; les ventes faites directement aux consommateurs sans l'entremise des détaillants sont exclues. Ont été soustraites de l'ensemble des ventes, les ventes de véhicules de tourisme et de véhicules automobiles effectuées par les concessionnaires.

Rapports techniques (voir la liste aux pages suivantes)

Working Papers

Documents de travail

*Technical Reports are published in the original language only, with an abstract in both official languages. Single copies of these publications may be obtained without charge by writing to: Public Information Division, Secretary's Department, Bank of Canada, Ottawa K1A 0G9. Consult the December 1982 issue of the Review for a list of the Staff Research Studies and Technical Reports published before 1980.*

#### Technical Reports

- 18 Simulation analysis of a model based on the life-cycle hypothesis (1980)  
Jean-Pierre Aubry and Diane Fleurent
- 19 The process of wage determination: A survey of some recent work (1979)  
Daryl L. Merrett
- 20 Some aspects of the Canadian experience with flexible exchange rates in the 1970s (1980)  
Charles Freedman and David Longworth
- 21 Two Canadian investment outlook surveys: An overview and a review (1980)  
Brian O'Reilly
- 22 Building a small macro-model for simulation: Some issues (1980)  
Paul R. Masson, David E. Rose and Jack G. Selody
- 23 The productivity-inflation nexus in Canada 1963-1979 (1981)  
J. Peter Jarrett and Jack G. Selody
- 24 Economic projections and econometric modelling: Recent developments at the Bank of Canada (1981)  
Heather Robertson and Michael McDougall
- 25 The equations of RDXF, September 1980 version (1982)  
Heather Robertson and Michael McDougall
- 26 The structure and dynamics of RDXF, September 1980 version (1982)  
Heather Robertson and Michael McDougall
- 27 Monetary aggregates as targets: Some theoretical aspects (1981)  
Charles Freedman
- 28 A comparison of alternative methods of monetary aggregation: Some preliminary evidence (1981)  
Jon P. Cockerline and John D. Murray
- 29 Investment: A survey of models with some implications for the effects of monetary policy (1981)  
Francis Scotland
- 30 The leading indicator properties of surveyed consumer attitudes and buying intentions (1982)  
Bruce Rayfuse
- 31 The economic significance of aspects of Canada's international payments (1982)  
Kevin Clinton and David Longworth
- 32 The saving-investment approach to the current account (1982)  
John T. Cuddington
- 33 An econometric model of the steel trade (1982)  
Richard Dion
- 34 Modelling government fiscal behaviour in Canada (1983)  
Jack G. Selody and Kevin G. Lynch
- 35 Asset stocks and the use of monetary and fiscal policies to reduce inflation (1983)  
Paul Masson

## Cover

### Scotland: James V (1513-1542) 6 pence (*bawbee*)

On his father's death in 1513 James V, at the age of one year, became King of Scotland. His coinage can be divided into three periods: 1513-1526, 1526-1539, and 1539-1542. The 6-pence piece or *bawbee* belongs to the last period when the only coins struck were of gold or billon (an alloy of silver and copper containing less than 50 per cent silver). The striking of the *bawbee*, which had a silver content of only 25 per cent, was not without controversy. James Achesoun who had been the master moneyer at the Edinburgh mint since 1526 'altogether refused' to strike such a base coin and resigned in 1538. He was replaced by Alexander Orrok, Laird of Sillebawby. *Bawbee*, the nickname for the 6-pence piece, probably came from his name. Two goldsmiths were entrusted with the coinage of the *bawbees* until 1540, but when they could not perform the task properly, Achesoun rejoined the mint as Orrok's colleague.

The obverse of the coin has a crowned thistlehead between the letter I and the number 5 surrounded by the legend: + IACOBUS.D.G.REX.SCOTORUM (James by the Grace of God, King of the Scots). Although the thistle appeared on Scottish coinage as early as 1473-74, the *bawbee* was the first piece to feature it as a main device. Time-honoured legend has it that the adoption of the thistle as Scotland's national symbol dates from the battle of Largs (1263) when one of the Norse invaders gave away a surprise attack by his cry of agony when he stepped barefoot on a thistle.

This coin, about the size of a Canadian 5-cent piece, is part of the National Currency Collection, Bank of Canada. Photography by James Zagon, Ottawa.

## Couverture

### Écosse : pièce de 6 pence (*bawbee*) de Jacques V (1513-1542)

Au décès de son père en 1513, Jacques V, âgé d'un an seulement, accéda au trône écossais. On distingue trois périodes dans l'histoire de la monnaie frappée sous son règne : 1513-1526, 1526-1539 et 1539-1542. Le *bawbee*, qui équivalait à 6 pence, appartient à la dernière période, où toutes les pièces étaient faites en or ou en billon (cuivre auquel est allié de l'argent dans une proportion inférieure à 50 %). La frappe du *bawbee* souleva des critiques, car la pièce ne contenait que 25 % d'argent. En effet, James Achesoun, maître monnayeur de l'atelier d'Édimbourg depuis 1526, refusa catégoriquement de frapper une pièce de si mauvais aloi et donna sa démission en 1538. Il fut remplacé par Alexander Orrok, laird de Sillebawby. C'est vraisemblablement là l'origine de *bawbee*, nom sous lequel était connue la pièce de 6 pence. Deux orfèvres furent chargés de la frappe de ces pièces jusqu'en 1540, mais, quand ils ne furent plus en mesure de s'acquitter de la tâche de façon satisfaisante, James Achesoun réintégra l'atelier monétaire pour y travailler avec Alexander Orrok.

L'avers de la pièce est illustré du charbon couronné, flanqué de la lettre I et du chiffre 5 et entouré de l'inscription + IACOBUS.D.G.REX.SCOTORUM (Jacques roi des Écossais par la grâce de Dieu). Même si le chardon figurait sur les pièces écossaises dès 1473-1474, le *bawbee* était la première pièce à l'arborer comme principal élément décoratif. D'après la légende, le chardon serait devenu l'emblème de l'Écosse depuis la bataille de Largs (1263), au cours de laquelle un envahisseur nordique fit échouer une attaque-surprise lorsque, posant son pied nu sur un chardon, il poussa un cri de douleur.

Cette pièce, de dimensions comparables à celles de la pièce canadienne de 5 cents, fait partie de la Collection nationale de monnaies, Banque du Canada. Photographie : James Zagon, Ottawa.

# The evolving international debt strategy

# Nouvelles stratégies en matière de dette internationale

## Introduction

Since August 1982, when Mexico announced that it was unable to continue servicing its external debts, the “debt crisis” of developing countries has been an integral part of the international economic scene. Resolution of the problem has been, and continues to be, a major preoccupation of the entire international community, involving not only debtor countries and their creditor banks, but also industrial countries and multilateral financial institutions,<sup>1</sup> which are also major creditors of developing countries.

The international community's strategy for dealing with the crisis has undergone considerable change since the early 1980s, but its broad aims have remained the same. Initially, emphasis was placed on protecting the international financial system from the systemic risks posed by the debt problems of middle-income developing countries. In the context of a severe global recession, there was a very real concern that one or more of the major international banks with large claims on developing countries (some in excess of 300 per cent of their capital), and already experiencing a deterioration in their domestic loan portfolios, could fail with attendant economic effects. As such concern receded, attention focussed on the severely indebted countries themselves and, in particular, on how to create the conditions necessary for sustained, non-inflationary growth in these countries – many of which were fledgling democracies. In certain respects, it can be argued that the international community is now faced with a development problem rather than a debt problem.

<sup>1</sup> For example, the International Monetary Fund (IMF) and the International Bank for Reconstruction and Development (the World Bank).

## Introduction

Depuis août 1982, soit au moment où le Mexique annonçait qu'il ne pouvait plus assurer le service de sa dette extérieure, la « crise de la dette » des pays en développement est à l'avant-scène de l'actualité économique internationale. La résolution de ce problème est devenue et reste une préoccupation majeure pour l'ensemble de la communauté internationale, touchant non seulement les pays débiteurs et leurs banques créancières, mais aussi les pays industriels et les institutions financières multilatérales, qui comptent aussi parmi les principaux créanciers des pays en développement<sup>1</sup>.

La stratégie mise de l'avant par la communauté internationale pour faire face à cette crise a subi des transformations importantes depuis le début des années 80, mais ses objectifs sont demeurés essentiellement les mêmes. Tout d'abord, on a cherché à mettre le système financier international à l'abri des risques systémiques rattachés aux problèmes de l'endettement des pays en développement à revenu moyen. Dans une conjoncture marquée par une forte récession à l'échelle internationale, on craignait fort qu'une ou plusieurs des grandes banques créancières des pays en développement (dans certains cas, les créances s'élevaient à plus de 300 % du capital de ces banques), qui voyaient déjà la qualité de leurs portefeuilles de prêts intérieurs se dégrader, ne tombent en faillite, avec toutes les conséquences économiques que cela comporte. Lorsque ces inquiétudes se sont apaisées, l'attention s'est portée sur les pays lourdement endettés eux-mêmes et sur les moyens de favoriser l'émergence de conditions qui garantissent une croissance économique soutenue et non inflationniste à ces pays, dont beaucoup faisaient l'apprentissage de la démocratie. À certains égards, on peut soutenir que le problème auquel la communauté internationale est à l'heure actuelle confrontée est un problème de développement plutôt que d'endettement.

<sup>1</sup> Par exemple le Fonds monétaire international (FMI) et la Banque internationale pour la reconstruction et le développement (la Banque mondiale).

## The origins of the crisis

At the end of 1970, medium- and long-term debt (excluding IMF loans) of developing countries<sup>2</sup> totalled U.S.\$63 billion. By 1982, such long-term debt had increased to U.S.\$561 billion and their total external debt was U.S.\$753 billion, the latter equivalent to about 36 per cent of gross national product (GNP). The marked increase in foreign indebtedness during this period affected all major geographic groupings of developing countries (Table I). For severely indebted middle-income countries (SIMICS), as defined by the International Bank for Reconstruction and Development (the

<sup>2</sup> The 111 reporting countries in which 1987 GNP per capita was less than U.S.\$6,000, as determined by the World Bank.

## Origine de la crise

À la fin de 1970, la dette à moyen et à long terme (à l'exclusion des prêts du FMI) des pays en développement totalisait 63 milliards de dollars É.-U.<sup>2</sup> Vers 1982, la dette à moyen et à long terme de ces pays avait atteint 561 milliards de dollars É.-U., et leur dette extérieure totale 753 milliards de dollars É.-U., ce dernier chiffre équivalant à environ 36 % du produit national brut (PNB) de l'ensemble de ces pays. La hausse substantielle de l'endettement extérieur qui s'est produite au cours de cette période a touché les pays en développement de toutes les grandes régions du monde (Tableau I). Quant aux pays à revenu moyen lourdement endettés (au sens de la Banque internationale pour la

<sup>2</sup> Il s'agit des 111 pays dont le PNB par tête était inférieur à 6 000 dollars É.-U. en 1987; la liste de ces pays a été établie par la Banque mondiale à partir des données que les pays lui communiquent.

World Bank), total external debt had reached U.S.\$382 billion by 1982, equivalent to roughly 50 per cent of their gross domestic product (GDP) and 275 per cent of their exports of goods and services (Table II). Much of this debt was owed to commercial banks, whose total long-term claims vis-à-vis the SIMICS rose from less than U.S.\$15 billion in 1970 to U.S.\$187 billion by 1982.

Canadian banks, which have traditionally been active international players, were significant lenders to developing countries. Total gross Canadian bank claims against SIMICS had risen through the 1970s and stood at U.S.\$15.5 billion by 1982.

Other groups of developing countries also experienced increases in their foreign indebtedness. One particularly affected region was sub-Saharan Africa. However, much of the external debt of countries in this region was owed to official creditors – the governments of industrial countries and multilateral financial institutions, such as development banks and the IMF – rather than to commercial banks. As a failure by these countries to service their debts did not pose a systemic threat to the international

reconstruction et le développement ou Banque mondiale), leur dette extérieure totale avait atteint 382 milliards de dollars É.-U. en 1982, soit environ 50 % de leur produit intérieur brut (PIB) et 275 % de leurs exportations de biens et services (Tableau II). Une grande partie de cette dette avait été contractée auprès de banques commerciales de sorte que l'ensemble des créances à long terme de ces dernières sur les pays en question est passé, sur la période 1970-1982, de moins de 15 à 187 milliards de dollars É.-U. Les banques canadiennes, qui sont depuis toujours très actives sur le marché international, ont été d'importants bailleurs de fonds des pays en développement. Le montant total brut des créances des banques canadiennes sur les pays à revenu moyen lourdement endettés, qui s'était accru au cours des années 70, se chiffrait à 15,5 milliards de dollars É.-U. en 1982.

D'autres groupes de pays en développement ont aussi connu un accroissement de leur endettement envers l'étranger. C'est tout particulièrement le cas de l'Afrique subsaharienne. Toutefois, la majeure partie de la dette extérieure des pays de cette région a été contractée auprès de sources publiques (gouvernements de pays industriels et institutions financières multilatérales, telles que les banques de développement et le FMI) plutôt qu'auprès de banques

financial system, the debt strategy focussed essentially on the debt problems of middle-income countries. For sub-Saharan Africa, flows of aid and concessional loans remained the main sources of funds.

A number of factors contributed to this massive increase in external indebtedness. In particular, international conditions during the 1970s encouraged bank lending to developing countries. Following the first oil shock in 1973, international banks, flush with funds deposited by oil exporters, were eager lenders to many developing countries suffering enlarged trade deficits due to the higher oil prices. This "recycling" of petro-dollars represented a departure from traditional project financing or trade finance by international banks in developing countries. Middle-income countries, which had experienced several years or more of sustained economic growth, were perceived as creditworthy borrowers, especially while commodity prices were high and rising. Additional comfort was taken from the view that, unlike commercial borrowers, sovereign borrowers could not go bankrupt given their power to raise additional revenues through taxation. At the same time, the low, and sometimes negative, real interest rates that prevailed in international capital markets through this period were very attractive to potential borrowers.

The massive borrowing that such conditions facilitated might not have caused a problem if the funds raised had been employed in productive activities. However, in many developing countries, borrowed resources were used to maintain a high level of consumption or to support low-yielding investments. Moreover, much of the long-term debt, particularly of middle-income countries, was contracted at floating rates of interest which exposed countries to significant risk if interest rates rose.

The marked rise in nominal and real interest rates that occurred in international capital markets after the second oil shock in 1979-80, along with a decline in real non-oil commodity prices, rendered the situation of these countries unsustainable. The external accounts of many developing countries were undermined still further by their inability, or unwillingness, to respond to these developments with appropriate macroeconomic and structural reforms. As well, residents of many developing countries, signalling their own lack of confidence in the management of

commerciales. Comme une incapacité de ces pays d'assurer le service de leur dette ne représentait pas un risque systémique pour le système financier international, la stratégie de la dette a porté essentiellement sur l'endettement des pays à revenu moyen. Pour l'Afrique subsaharienne, les principales sources de fonds sont demeurées l'aide financière et les prêts concessionnels.

La hausse massive de l'endettement extérieur tient à un certain nombre de facteurs. En particulier, la conjoncture internationale des années 70 incitait les banques à prêter aux pays en développement. Après le premier choc pétrolier de 1973, les banques d'envergure internationale, qui regorgeaient de fonds déposés par les pays exportateurs de pétrole, se sont empressées de prêter ceux-ci à de nombreux pays en développement affligés par des déficits accrus de leurs balances commerciales, déficits attribuables au renchérissement du pétrole. Cette opération de « recyclage » des pétrodollars se démarquait du mode de financement de projets ou de soutien aux échanges commerciaux qui était jusque-là le champ d'activité traditionnel des banques d'envergure internationale dans les pays en développement. Les pays à revenu moyen, qui avaient à leur actif plusieurs années de croissance économique soutenue, étaient considérés comme des emprunteurs solvables, d'autant plus que les cours des produits de base, déjà élevés, allaient s'accroissant. En outre, on était d'avis que, contrairement aux entreprises commerciales, les emprunteurs souverains ne pouvaient pas faire faillite en raison de leur capacité de lever des impôts pour accroître leurs revenus. Parallèlement, les taux d'intérêt réels peu élevés, ou parfois négatifs, pratiqués sur les marchés financiers internationaux durant cette période s'avéraient très attrayants pour les emprunteurs éventuels.

Le recours massif aux emprunts qui a ainsi été facilité n'aurait peut-être pas posé de problème si les fonds recueillis avaient été consacrés à des activités productives. Toutefois, dans beaucoup de pays en développement, les fonds empruntés ont servi à maintenir un niveau élevé de consommation ou à soutenir des investissements peu productifs. De plus, une bonne partie de la dette à long terme, particulièrement celle des pays à revenu moyen, était assortie de taux d'intérêt variables, ce qui exposait les pays emprunteurs à des risques sérieux en cas de relèvement des taux d'intérêt.

La hausse substantielle des taux d'intérêt nominaux et réels qui s'est produite sur les marchés financiers internationaux après le deuxième choc pétrolier de 1979-1980 conjuguée à la baisse des cours réels des produits de base autres que le pétrole a mis les pays en développement dans une position intenable. Bon nombre de ces pays ont vu le solde de leurs comptes extérieurs se détériorer encore davantage à cause de leur incapacité ou de leur refus de faire face à la situation par la mise en oeuvre de réformes macroéconomiques et structurelles

their economies, sent large amounts of money abroad, as “flight capital,” further corroding the external accounts of the debtor countries.

## Response from the international community

### *The initial debt strategy (1982-85)*

In the years immediately following the Mexican announcement, it was generally accepted that measures were needed in severely indebted developing countries to bring demand into line with reduced resources. To soften the impact on those countries of adjusting to the sharp reduction in their ability to borrow in international capital markets and to reduce the possibility of country defaults, a multifaceted approach, led by the International Monetary Fund (IMF), was developed. Debtor countries agreed to introduce stabilization programs designed to address their fiscal and current account deficits. Concurrently, the IMF provided its economic expertise in the development of such programs and some of the required financing. The receipt of the Fund’s “seal of approval” catalyzed the provision of additional funds from banks and industrial countries. To help meet short-term liquidity needs of debtor countries, pending the disbursement of IMF and World Bank funds, the central banks of major industrial countries, including Canada, also provided short-term “bridge” loans to a number of countries.

Given the number of commercial bank creditors involved (over 500 initially in the case of Mexico), bank advisory committees, consisting of leading creditor banks, were established to negotiate with debtor countries on new terms for existing loans as well as new loans, and to co-ordinate bank actions. On the advice of these committees, banks rescheduled principal payments coming due (i.e., extended the maturity period of existing loans) and provided new loans, often equivalent to a significant portion of the interest scheduled to be paid. The new lending was involuntary in the sense that while banks had already indicated their unwillingness to make new loans individually to countries whose creditworthiness was in doubt, most were willing on a co-ordinated, collective basis to provide new funds in order to safeguard, or improve, the quality of existing loans.

appropriées. De même, les résidents de bon nombre de pays en développement témoignaient leur propre méfiance envers la gestion économique de leur pays en expatriant de fortes sommes d’argent, aggravant encore par cette fuite de capitaux la situation des comptes extérieurs des pays débiteurs.

## Réaction de la communauté internationale

### *Stratégie initiale de résolution de la crise de la dette (1982-1985)*

Au cours des premières années qui ont suivi l’annonce du gouvernement mexicain, on acceptait généralement l’idée que les pays en développement lourdement endettés devaient adopter des mesures en vue d’harmoniser la demande globale avec les ressources limitées dont ils disposaient. Ces pays devaient donc s’ajuster à une forte diminution de leur capacité d’emprunter sur les marchés financiers internationaux. Aussi a-t-on élaboré, à l’initiative du Fonds monétaire international (FMI), une approche multiforme visant à atténuer l’effet d’un tel ajustement et à réduire la possibilité qu’un pays manque à ses engagements. Les pays débiteurs acceptaient de mettre en place des programmes de stabilisation afin de réduire leurs déficits au titre du budget et de la balance courante. De son côté, le FMI apportait à l’élaboration de ces programmes son expertise en matière économique et assurait une partie du financement nécessaire. L’obtention du « cachet d’approbation » du Fonds activait l’octroi de fonds additionnels par les banques et les pays industriels. Pour aider les pays débiteurs à satisfaire à leurs besoins de trésorerie à court terme en attendant les décaissements de fonds en provenance du FMI et de la Banque mondiale, les banques centrales des grands pays industriels, dont le Canada, ont aussi accordé des crédits-relais à court terme à un certain nombre de ces pays.

Étant donné le grand nombre de banques commerciales créancières concernées par le problème de la dette (plus de 500 à l’origine dans le cas du Mexique), on a constitué des comités consultatifs regroupant les principales banques créancières en vue de négocier avec les pays débiteurs de nouvelles modalités applicables aux prêts existants et de nouveaux prêts et de coordonner l’action des banques. Sur l’avis de ces comités, les banques ont rééchelonné les versements de principal qui devenaient exigibles (c’est-à-dire qu’elles ont prolongé l’échéance des prêts existants) et accordé de nouveaux prêts qui correspondaient souvent à une portion importante de l’intérêt à verser. Les nouveaux prêts étaient en un sens involontaires : les banques se disaient non disposées à octroyer individuellement de nouveaux prêts aux pays dont la solvabilité était douteuse, mais elles étaient prêtes pour la plupart à accorder de

Official creditors (i.e., governments and international financial institutions, such as the IMF and the World Bank) also participated in the debt strategy. Creditor governments, operating through the "Paris Club," rescheduled their loans, once Fund-supported stabilization programs had been implemented.<sup>3</sup> Countries that had their official debts rescheduled by the Paris Club also generally remained eligible for new export credits. In addition, the World Bank and the IMF stepped up their lending.

Based on an assumption of reasonably strong growth in industrial countries, the combination of domestic retrenchment by heavily indebted developing countries, lengthened repayment terms on existing debt, and new loans was expected to overcome the financial difficulties of developing countries within a relatively short time. Indeed, this strategy met with some initial success. With real growth in the industrial countries, notably in the United States and Japan, recovering strongly following the 1981-82 recession, restrictive domestic policies and financial constraints led to a sharp reduction in the external deficits of heavily indebted developing countries.

By late 1984, some commentators were of the view that the debt crisis was all but over. The success, however, was not firmly based. The underlying fragility of many developing countries became increasingly apparent through 1985, owing to a marked downturn in commodity prices and a deterioration in their terms of trade (the ratio of export to import prices). While some developing countries had experienced strong export growth, much of the improvement in external accounts had been due to the compression of imports. As well, the external indebtedness of many of these countries continued to grow. By the end of 1985, total external debts of developing countries had reached almost U.S.\$1 trillion. External debts of the SIMICS totalled U.S.\$458 billion, equivalent to 64 per cent of GDP or 317 per cent of their exports of goods and services. Total gross claims of Canadian banks on severely indebted middle-income countries had risen to U.S.\$17.3 billion.

nouveaux fonds sur une base concertée et conjointe dans le but de sauvegarder ou d'améliorer la qualité des prêts existants.

Les créanciers officiels (c'est-à-dire les gouvernements et les institutions financières internationales, telles que le FMI et la Banque mondiale) ont aussi participé à la stratégie de la dette. Les États créditeurs réunis au sein du Club de Paris rééchelonnaient leurs prêts dès la mise en application d'un programme de stabilisation approuvé par le Fonds<sup>3</sup>. Les pays dont la dette officielle avait été rééchelonnée par le Club de Paris ont continué d'avoir droit, dans l'ensemble, à de nouveaux crédits à l'exportation. En outre, la Banque mondiale et le FMI ont intensifié l'octroi de fonds.

S'appuyant sur l'hypothèse d'une croissance économique raisonnablement forte dans les pays industriels, on espérait qu'une politique intérieure d'austérité de la part des pays lourdement endettés conjuguée au rééchelonnement des prêts existants et à l'octroi de nouveaux crédits permettrait aux pays en développement de surmonter leurs difficultés financières dans un laps de temps relativement court. De fait, cette stratégie a remporté quelques succès au début. À la faveur de la croissance enregistrée dans les pays industriels, notamment les États-Unis et le Japon, qui ont connu une forte reprise après la récession de 1981-1982, l'adoption de politiques d'austérité par les pays en développement lourdement endettés et les contraintes financières pesant sur eux ont entraîné une forte réduction des déficits extérieurs de ces pays.

Vers la fin de 1984, certains observateurs ont émis l'avis que la crise de la dette était virtuellement terminée. Les progrès accomplis ne reposaient cependant pas sur des bases solides. La faiblesse sous-jacente de bon nombre de pays en développement est devenue de plus en plus évidente tout le long de 1985, après un repli marqué des prix des produits de base et une détérioration de leurs termes de l'échange (c'est-à-dire des prix de leurs exportations par rapport à leurs importations). Bien que certains pays en développement aient augmenté vigoureusement leurs exportations, les améliorations survenues au chapitre des comptes extérieurs tenaient en grande partie à une réduction des importations. De même, la dette extérieure d'un grand nombre de ces pays continuait d'augmenter. À la fin de 1985, l'endettement extérieur de l'ensemble des pays en développement s'élevait à près de 1 billion de dollars É.-U. La dette envers l'étranger des pays à revenu moyen lourdement endettés se situait à 458 milliards de dollars É.-U., soit 64 % de leur PNB ou 317 % du montant de

<sup>3</sup> The Paris Club is the forum in which government loans are rescheduled. The meetings are typically held in Paris, hence the name, and are, by tradition, chaired by a senior official of the French Treasury. For Canada, claims of the Export Development Corporation, the Wheat Board and certain aid credits extended by the Canadian International Development Agency are covered by the Paris Club.

<sup>1</sup> Le Club de Paris est la tribune où se rééchelonnent les prêts accordés par les gouvernements. Il doit son nom au fait que les réunions ont habituellement lieu à Paris. Par tradition, un haut fonctionnaire du Trésor français préside les réunions. Dans le cas du Canada, le Club de Paris s'occupe des créances de la Société pour l'expansion des exportations et de la Commission canadienne du blé et de certains crédits offerts en guise d'aide par l'Agence canadienne de développement international.

### *A revised strategy: the Baker Plan (1985-1988)*

Responding to concerns that the international debt strategy had not adequately addressed the debt problems of middle-income developing countries, then-U.S. Treasury Secretary James Baker put forward a revised program at the September 1985 annual meetings of the IMF and World Bank. He proposed a shift in focus away from simple restraint towards a more complex strategy designed to allow debtor countries to grow out of their problems. This new strategy would involve measures designed not only to reduce demand but also to encourage the production of goods and services in severely indebted developing countries through growth-oriented structural reforms. Such reforms would be supported by an increased flow of funds from multilateral financial institutions (notably the World Bank) and commercial banks, following the introduction of an IMF-supported economic program on a case-by-case basis. Lending goals were established under which the World Bank and the Inter-American Development Bank would increase their gross disbursements to a group of fifteen heavily indebted countries<sup>4</sup> by 50 per cent, to roughly U.S.\$9 billion per year during the 1986-88 period. Commercial banks would also increase their lending to these countries over the same period by U.S.\$20 billion.

Industrial countries were also assigned a role under the Baker Plan. They would provide the necessary international conditions for sustained growth and the development of international trade. In addition, they would continue to stand ready to reschedule their claims on countries that had negotiated Fund programs.

For a number of developing countries, the Baker Plan did not achieve the hoped-for results. While many countries introduced structural adjustment programs, economic conditions remained poor and real per capita income fell sharply. A number of factors were responsible.

First, adjustment efforts in many developing countries were, for the most part, inadequate and unsustainable. With hindsight, it is apparent that the political difficulties inherent in implementing structural reforms were underestimated. The short-term costs of structural adjustment, caused by the redeployment of labour and capital, with resulting losses of output and employment, were

leurs exportations de biens et services. Le montant total brut des créances des banques canadiennes sur les pays à revenu moyen lourdement endettés avait atteint 17,3 milliards de dollars É.-U.

### *Nouvelle stratégie : le Plan Baker (1985-1988)*

Comme on s'inquiétait de ce que la stratégie mise de l'avant pour résoudre la crise de la dette internationale ne donnait pas de résultats suffisants pour ce qui est des pays en développement à revenu moyen, le secrétaire au Trésor américain de l'époque, James Baker, a proposé une stratégie révisée lors des assemblées annuelles du FMI et de la Banque mondiale tenues en septembre 1985. La stratégie plus complexe qu'il proposait ne se limiterait plus à de simples restrictions et permettrait à la longue aux pays débiteurs de surmonter eux-mêmes leurs difficultés. Cette nouvelle stratégie comportait donc des mesures visant non seulement à réduire la demande, mais aussi à stimuler la production de biens et de services dans les pays en développement lourdement endettés, grâce à des réformes structurelles axées sur la croissance économique. Ces réformes seraient soutenues par des entrées accrues de fonds en provenance d'institutions financières multilatérales (notamment, la Banque mondiale) et de banques commerciales lorsqu'un pays adopterait un programme économique adapté spécifiquement à son cas et appuyé par le FMI. Dans le cadre de cette nouvelle stratégie, des objectifs en matière de prêts ont été établis en vertu desquels les décaissements de fonds en provenance de la Banque mondiale et de la Banque interaméricaine de développement au bénéfice d'un groupe de quinze pays lourdement endettés s'accroîtraient de 50 % pour atteindre 9 milliards de dollars É.-U. par année sur la période 1986-1988<sup>4</sup>. De même, les prêts des banques commerciales à ces pays seraient accrus de 20 milliards de dollars É.-U. au cours de la même période.

Le Plan Baker assignait aussi un rôle aux pays industriels : ceux-ci verraient au maintien, sur le plan international, de conditions propices à une croissance économique soutenue et au développement du commerce international. De plus, ils resteraient disposés à rééchelonner leurs créances sur les pays qui auraient négocié un programme de stabilisation avec le Fonds.

Pour un certain nombre de pays en développement, le Plan Baker n'a pas donné les résultats escomptés. Bien que de nombreux pays aient mis en place des programmes d'ajustement structurel, leur situation économique restait médiocre, et leur revenu réel par tête avait chuté. Cela tient à un certain nombre de facteurs.

<sup>4</sup> Argentina, Bolivia, Brazil, Chile, Colombia, Côte d'Ivoire, Ecuador, Mexico, Morocco, Nigeria, Peru, Philippines, Uruguay, Venezuela and Yugoslavia.

<sup>4</sup> L'Argentine, la Bolivie, le Brésil, le Chili, la Colombie, la Côte-d'Ivoire, l'Équateur, le Maroc, le Mexique, le Nigeria, le Pérou, les Philippines, l'Uruguay, le Venezuela et la Yougoslavie

immediate and easily observable, whereas the gains resulting from an improved allocation of economic resources and greater efficiency were of a longer-term nature and not readily appreciated. Moreover, the costs of structural adjustment are usually felt most heavily by the poorest members of society – a particular problem in countries with wide income disparities.

Second, despite a favourable external environment, with strong growth and modest inflation in the industrial countries, the terms of trade of most severely indebted developing countries continued to deteriorate during 1986-88. This was particularly true for major oil exporters, like Mexico and Venezuela, after the sharp fall in oil prices in 1986. Continued restrictions in industrial countries on the imports of goods from developing countries exacerbated the situation.

Third, the flow of funds from multilateral financial institutions and commercial banks fell considerably short of expectations. Over the 1986-88 period, net IMF lending to severely indebted developing countries slowed sharply as countries that had borrowed extensively from the Fund during the early 1980s began to repay their loans. This was in keeping with the comparatively short-term nature of Fund loans. Over the same period, gross disbursements of the World Bank to the fifteen most heavily indebted countries averaged U.S.\$5.3 billion, compared with roughly U.S.\$4 billion in 1985, an increase of about one-third, a much smaller increase than that called for under the Baker Plan. Concurrently, disbursements of the Inter-American Development Bank to these countries actually fell from U.S.\$2.5 billion in 1985 to an average of U.S.\$1.7 billion in 1986-1988, reflecting difficulties in reaching an agreement among the Bank's shareholders on a capital increase for the institution.

At the same time, significant new lending by commercial banks did not materialize. On balance, long-term bank claims against the SIMICS rose by only U.S.\$5 billion to U.S.\$255 billion over the three-year period, with claims actually falling in 1988. Gross claims of Canadian banks against the SIMICS declined from their 1985 peak of U.S.\$17.3 billion in 1988 to U.S.\$14.2 billion in 1988. The reluctance of commercial banks to make new loans to developing countries was prompted by several factors. In some cases, banks were concerned about the willingness of certain

Premièrement, les ajustements tentés dans de nombreux pays en développement n'ont été en général ni suffisants ni soutenus. Avec le recul, il est manifeste que les difficultés d'ordre politique découlant de la mise en oeuvre des réformes structurelles avaient été sous-estimées. Les coûts à court terme de l'ajustement structurel attribuable à la reconversion de la main-d'oeuvre et du capital, avec les baisses de production et les pertes d'emploi qu'il entraîne, ont été immédiats et faciles à observer, alors que les avantages d'une meilleure répartition des ressources et d'une plus grande efficience de l'économie ne se matérialiseraient que dans le long terme et n'étaient pas perceptibles immédiatement. En outre, les coûts d'ajustement structurel se répercutent habituellement avec le plus d'acuité sur les couches sociales les plus pauvres, et ceci constitue un problème particulièrement aigu dans les pays où les écarts de revenus sont très grands.

Deuxièmement, malgré une conjoncture internationale favorable, caractérisée par une forte croissance et un faible taux d'inflation dans les pays industriels, les termes de l'échange des pays en développement les plus lourdement endettés ont continué de se détériorer sur la période 1986-1988. Cela est particulièrement vrai dans le cas des principaux pays exportateurs de pétrole, comme le Mexique et le Venezuela, après la dégringolade des prix du pétrole en 1986. Le maintien dans les pays industriels de restrictions sur les importations de biens et services en provenance de pays en développement a aggravé la situation.

Troisièmement, les flux de crédit en provenance d'institutions financières multilatérales et de banques commerciales ont été nettement inférieurs aux prévisions. Au cours de la période 1986-1988, le crédit net octroyé par le FMI aux pays en développement lourdement endettés a diminué considérablement, les pays qui avaient largement eu recours aux ressources du Fonds au début des années 80 ayant commencé à rembourser leurs emprunts. Cela était conforme aux modalités des prêts consentis par le Fonds, qui sont d'assez courte durée. Durant cette période, le financement brut accordé par la Banque mondiale aux quinze pays les plus lourdement endettés s'est élevé en moyenne à 5,3 milliards de dollars É.-U., contre quelque 4 milliards de dollars É.-U. en 1985. Cette augmentation d'environ un tiers a été bien en deçà de ce qui avait été prévu dans le Plan Baker. Parallèlement, les concours financiers que la Banque interaméricaine de développement accorde à ces pays sont en fait passés de 2,5 milliards de dollars É.-U. en 1985 à une moyenne de 1,7 milliard de dollars É.-U. durant la période 1986-1988, les actionnaires de la Banque ayant eu beaucoup de difficultés à s'entendre sur un accroissement du capital de cette dernière.

countries to pay interest and principal contractually owed to them. In others, there were doubts about the long-term ability of some countries to continue to service fully their existing claims. New lending was often perceived as tantamount to throwing good money after bad.

In this environment, many commercial lenders actually sought to reduce rather than increase their exposure to developing countries. With the emergence of an informal secondary market for bank claims on developing countries, notably after 1985, some banks began to sell their claims at a discount. The exchange of bank claims for equity investments in debtor countries (debt-for-equity swaps) also became increasingly popular. A limited number of debtor countries – notably Chile, Bolivia and Mexico – were also permitted by creditor banks to buy back their debts at a discount from par or to exchange existing debts at a discount for other obligations. Of particular interest was the exchange in early 1988 of Mexican public sector debt for newly issued and collateralized 20-year Mexican bonds at a sizable discount, which resulted in a U.S.\$1.1 billion reduction in Mexico's external debt. This exchange provided a model for later, officially supported, debt-reduction operations.

Overall, it has been estimated that bank debts with a face value of U.S.\$26 billion were reduced through a variety of transactions during the 1986-88 period.<sup>5</sup> Such debt-reducing transactions provided developing countries with significant cash-flow relief during this period.

### *Some successes*

Despite the difficulties associated with the international debt strategy up to this point, there were some successes. International banks were given time to strengthen their balance sheets both through the acquisition of new capital and through establishing reserves against possible losses on loans to developing countries. In many countries, a minimum level of reserves was required by bank supervisory agencies. However, following the decision in May 1987 by a major U.S. bank to increase significantly its reserves on developing country loans, the pace of bank

En outre, les nouveaux crédits importants qui devaient provenir des banques commerciales ne se sont pas matérialisés. Tout compte fait, les créances bancaires à long terme sur les pays à revenu moyen lourdement endettés ne se sont accrues que de 5 milliards de dollars É.-U. en trois ans pour s'établir à 255 milliards de dollars É.-U., et elles ont même diminué en 1988. Les créances brutes des banques canadiennes sur les pays à revenu moyen lourdement endettés se sont établies à 14,2 milliards de dollars É.-U. en 1988, en baisse par rapport au sommet de 17,3 milliards de dollars É.-U. atteint en 1985. Le peu d'empressement que montraient les banques commerciales à octroyer de nouveaux prêts aux pays en développement tenait à plusieurs facteurs. Dans certains cas, les banques craignaient que des pays n'aient pas vraiment l'intention de verser les montants en principal et intérêts prévus au contrat. Dans d'autres, elles n'étaient pas sûres que certains des pays seraient capables pendant longtemps d'assurer entièrement le service de leur dette. L'octroi de nouveaux crédits a souvent été perçu par les banques comme une aberration.

Dans ce contexte, bon nombre de banques commerciales cherchaient en définitive à réduire plutôt qu'à augmenter l'encours de leurs prêts aux pays en développement. Avec l'apparition, notamment après 1985, d'un marché secondaire informel des créances bancaires sur les pays en développement, certaines banques ont commencé à vendre leurs créances avec une décote. La conversion de créances bancaires en prises de participation dans les pays débiteurs a également gagné en popularité. Un nombre limité de pays débiteurs – à savoir le Chili, la Bolivie et le Mexique, ont aussi été autorisés par les banques créancières à racheter leurs dettes à un prix inférieur à la valeur nominale ou à échanger leurs dettes contre d'autres types d'obligations moyennant une décote. À cet égard, il convient de signaler un fait particulièrement intéressant, à savoir l'échange, au début de 1988, de dettes du secteur public mexicain, nettement au-dessous de leur valeur nominale, contre une nouvelle émission garantie d'obligations mexicaines à 20 ans. Cet échange, qui s'est traduit par une réduction de 1,1 milliard de dollars É.-U. de la dette extérieure du Mexique, a servi de modèle pour les opérations ultérieures de réduction de la dette qui ont reçu la caution officielle.

Dans l'ensemble, on estime à 26 milliards de dollars É.-U. la valeur nominale des créances bancaires qui ont bénéficié d'opérations de réduction de la dette au cours de la période 1986-1988<sup>5</sup>. Grâce à ces opérations, les problèmes de

<sup>5</sup> The Institute of International Finance, "The Way Forward for Middle-Income Countries," January 1989.

<sup>5</sup> Institut de finances internationales, *The Way Forward for Middle-Income Countries*, janvier 1989.

provisioning accelerated in most industrial countries. As a consequence, by 1988 the threat to the international financial system posed by the ongoing debt problems of developing countries had diminished considerably. By the end of 1989 most major international banks had established extensive reserves (at least 50 per cent of their outstanding exposures) against their claims on severely indebted developing countries. Canadian banks had established reserves equivalent to roughly two-thirds of their gross claims on problem debtor countries by the end of 1989, and this had risen to more than 70 per cent by late 1990.

A number of developing countries also managed to overcome their debt problems. One particular success story was South Korea. Once numbered among the most heavily indebted countries, South Korea managed to reduce its international debts from a high of about U.S.\$47 billion (52 per cent of GDP) in 1985 to under U.S.\$34 billion (less than 20 per cent of GDP) by 1989, while maintaining a robust rate of real growth. Other developing countries, such as Indonesia and Colombia, also managed to stabilize their economies, avoid debt reschedulings and maintain limited access to international capital markets. More recently, Chile has also had considerable success, with several years of high rates of real growth and declining international indebtedness, the latter due principally to considerable use of debt-for-equity swaps as well as debt buy-backs.

### *The Brady initiative (1989 – present): Sanctioning debt reduction*

In March 1989, in response to evidence of “serious problems and impediments to a successful resolution of the debt crisis,”<sup>6</sup> U.S. Treasury Secretary Brady presented a number of proposals aimed at strengthening the international debt strategy and encouraging sustainable growth. The new initiative incorporated key features of the preceding Baker Plan – an emphasis on growth, sound macroeconomic and structural adjustment policies, inflows of external resources and a case-by-case approach. It also

liquidité des pays en développement ont été sensiblement allégés pendant cette période.

### *Quelques succès*

En dépit des difficultés d'application de la stratégie internationale de la dette signalées jusqu'ici, celle-ci a tout de même remporté quelques succès. Grâce à elle, les banques internationales ont eu le temps d'assainir leur bilan à la fois en acquérant des capitaux frais et en constituant des réserves pour les pertes possibles sur les prêts aux pays en développement. Dans bon nombre de pays, les agences de surveillance des banques ont obligé ces dernières à maintenir un niveau minimal de réserves. Toutefois, les banques commerciales de la plupart des pays industriels ont accru rapidement leurs provisions pour pertes après qu'une grande banque américaine eut décidé, en mai 1987, d'augmenter considérablement ses réserves pour les prêts octroyés aux pays en développement. Vers 1988, la menace que le problème endémique de la dette des pays en développement faisait peser sur le système financier international s'était beaucoup atténuée en conséquence. À la fin de 1989, la plupart des grandes banques d'envergure internationale avaient constitué des réserves importantes (s'élevant à au moins 50 % de l'encours de leurs prêts) pour les créances qu'elles détiennent sur les pays en développement lourdement endettés. Les réserves des banques canadiennes avoisinaient à la même époque les deux tiers de l'encours brut des prêts consentis aux pays aux prises avec des difficultés financières; à la fin de 1990, elles représentaient plus de 70 % de cet encours.

D'autre part, un certain nombre de pays en développement ont réussi à surmonter leurs problèmes d'endettement. À cet égard, la Corée du Sud s'est particulièrement distinguée. Ce pays, qu'on comptait autrefois parmi les plus lourdement endettés, est parvenu à réduire sa dette internationale, qui avoisinait les 47 milliards de dollars É.-U. (52 % du PIB) en 1985, à moins de 34 milliards de dollars É.-U. (moins de 20 % du PIB) en 1989, tout en maintenant un taux de croissance soutenu. D'autres pays en développement, comme l'Indonésie et la Colombie, ont également réussi à stabiliser l'évolution de leurs économies, à éviter le rééchelonnement de leur dette et à conserver un accès même limité aux marchés financiers internationaux. Plus récemment, le Chili a aussi connu un succès considérable, avec plusieurs années de taux élevés de croissance et une baisse de sa dette extérieure, attribuable surtout à d'importantes conversions de dettes en prises de participation et aux rachats de dettes.

<sup>6</sup> Treasury News, “Remarks by the Secretary of the Treasury Nicholas F. Brady to the Brookings Institution and The Bretton Woods Committee, Conference on Third World Debt,” 10 March 1989.

reaffirmed the need for banks to continue to lend to heavily indebted countries. However, drawing from earlier market experience with debt reduction – in particular, the 1988 Mexican debt exchange – emphasis was placed on commercial banks negotiating with debtor countries a voluntary, market-based reduction of their claims. In addition, building on earlier proposals developed by Japan and France, it was suggested that “timely and flexible” financial support for eligible developing countries could be provided by multilateral financial institutions to facilitate and encourage reductions in their debt and debt-service burdens.<sup>7</sup>

The Brady proposals also placed greater emphasis on the need for developing countries to introduce policies aimed at strengthening domestic savings, promoting the return of flight capital and attracting new flows of non-bank private capital, especially through the use of debt-for-equity swaps.

### Debt reduction: The rationale

Although banks had been engaging in debt reduction on a voluntary basis with certain countries prior to the announcement of the Brady initiative, the new approach represented a major shift in official thinking. Up to this point, it had been widely accepted that debt reduction was likely to hinder the eventual return of severely indebted countries to capital markets, since prospective lenders might be unwilling to lend to countries that had been unable to honour their prior contractual obligations. However, given the poor economic prospects of many of these countries, it was clear by 1989 that any near-term access was in any case most unlikely. As a measure of the problem, net financial transfers (which include interest and principal payments on existing debts as well as disbursements of new loans) of the SIMICS recorded an outflow of U.S.\$29 billion in 1989, compared with inflows of under U.S.\$4 billion in 1982 and about U.S.\$9 1/2 billion in 1980 (Table II). In this environment, negotiated debt reduction appeared to be a way to slow the net outflow of resources from severely indebted developing countries.

<sup>7</sup> Debt and debt-service reduction are very similar in that both provide a measure of relief to a debtor country by reducing the present value of contractual claims. In the first case, the principal is reduced at an unchanged market interest rate. In the second case, the principal due is left unchanged but the interest rate is reduced to a below-market rate.

### *Le Plan Brady (depuis 1989) : autorisation de la réduction de la dette*

En mars 1989, devant « les problèmes graves et les entraves à la résolution de la crise de la dette »<sup>6</sup>, le secrétaire au Trésor américain, Nicholas Brady, a formulé un certain nombre de propositions visant à renforcer la stratégie internationale de la dette et à favoriser une croissance économique durable. Le nouveau plan reprenait les éléments clés du Plan Baker, en ce sens qu'il mettait l'accent sur la croissance, l'application de politiques macroéconomiques et d'ajustement structurel saines, l'apport de capitaux frais d'origine étrangère et le traitement de chaque cas selon son mérite. Il réaffirmait aussi la nécessité pour les banques de continuer de prêter aux pays lourdement endettés. Toutefois, en s'appuyant sur l'expérience acquise par le marché en matière de réduction de dette, notamment dans l'échange de dettes par le Mexique en 1988, le Plan Brady soulignait l'importance pour les banques commerciales de négocier avec les pays débiteurs une réduction volontaire de la dette en fonction de la valeur de celle-ci sur le marché. En outre, en s'appuyant sur les propositions formulées antérieurement par le Japon et la France, il soutenait que les institutions financières multilatérales pourraient accorder un appui financier « ponctuel et souple » aux pays en développement admissibles afin de faciliter et de favoriser une réduction de l'encours et du service de leur dette.

Le Plan Brady faisait ressortir encore plus fortement la nécessité pour les pays en développement de mettre en oeuvre des politiques visant à accroître l'épargne intérieure, à promouvoir le rapatriement des capitaux enfuis et à attirer de nouveaux flux de capitaux privés de sources non bancaires, en ayant surtout recours à la conversion de dettes en prises de participation.

### La logique de la réduction de la dette

Même si les banques se sont lancées volontairement dans des opérations de réduction de la dette avec certains pays avant l'annonce du Plan Brady, la nouvelle approche traduisait un changement important d'opinion de la part des pouvoirs publics. Jusqu'alors, il avait été généralement admis que la réduction de la dette pourrait nuire au retour des pays lourdement endettés sur les marchés de capitaux, étant donné que les prêteurs éventuels ne seraient peut-

<sup>6</sup> *Treasury News*, « Remarks by the Secretary of the Treasury Nicholas F. Brady to the Brookings Institution and the Bretton Woods Committee, Conference on Third World Debt », 10 mars 1989.

Les opérations de réduction de l'encours et du service de la dette sont très similaires en ce sens que les deux types d'opérations contribuent à soulager le pays débiteur en abaissant la valeur actualisée des créances contractuelles. Dans le premier cas, le principal est réduit, et le taux d'intérêt du marché reste inchangé. Dans le deuxième cas, le principal exigible n'est pas modifié, mais le taux d'intérêt est ramené en deçà du taux du marché.

In addition to providing a direct cash benefit to severely indebted countries, debt reduction may have other benefits. In particular, the burden of servicing large external debts may itself represent a significant impediment to new investment and growth; a so-called "debt overhang." Depending on the size of the external debts, potential investors, both domestic and foreign, may refrain from investing in economic ventures, fearing that any profits will be taxed away by the government to service existing debts. Associated with this reluctance to invest domestically could well be a trend to capital flight and significantly higher domestic interest rates. In addition, there may be little incentive for a government in such a country to implement sound policies since any resulting improvement in the country's balance of payments would, for a time, accrue largely to creditors. In these circumstances, it is argued that debt reduction, in combination with sound economic policies, may unlock greater investment and economic growth by reducing uncertainty, thereby increasing the capacity of the country to service its remaining debts. The resulting rise in secondary market prices may increase the market value of remaining claims, possibly more than offsetting the cost to creditors of granting debt reduction. As a consequence, debt reduction may in certain cases be a "win-win" proposition for both creditors and debtors.

Opinion is not unanimous, however, on the effectiveness of debt reduction as a means of stimulating real growth. Some commentators argue that large external debts are a symptom and not a cause of low growth, and contest the very existence of a "debt overhang" in most developing countries. They point out that real growth in severely indebted Latin American countries had declined sharply prior to the onset of the debt crisis in 1982. Others argue that it might be preferable for a severely indebted country to use available resources for investment rather than to facilitate debt reduction. Concerns have also been raised about the possibility that developing countries may not allocate to investment the debt-service savings that result from debt reduction. In addition, unless a substantial part of a heavily indebted country's external debts is eliminated, remaining bank claims would continue to trade on the secondary market at a significant discount. In such circumstances, the disincentives for

être pas disposés à octroyer du crédit à des pays qui dans le passé n'avaient pu honorer leurs obligations contractuelles. Toutefois, compte tenu des sombres perspectives économiques de bon nombre de ces pays, il était évident en 1989 qu'un accès aux marchés de capitaux était de toute façon très improbable dans un proche avenir. Pour donner une idée de l'ampleur du problème, signalons qu'en 1989, les pays à revenu moyen lourdement endettés ont effectué des transferts financiers nets (comprenant les paiements d'intérêts et de principal sur les dettes existantes et les décaissements de fonds liés aux nouveaux prêts) de 29 milliards de dollars É.-U., alors qu'ils avaient enregistré des entrées nettes de fonds de près de 4 milliards de dollars É.-U. en 1982 et d'environ 9,5 milliards de dollars É.-U. en 1980 (Tableau II). Dans ce contexte, la réduction négociée de la dette apparaissait comme un moyen de ralentir les sorties nettes de capitaux des pays en développement lourdement endettés.

En plus de procurer directement des liquidités aux pays lourdement endettés, la réduction de la dette peut présenter d'autres avantages. Rappelons en particulier que le service d'une dette extérieure importante peut constituer un obstacle considérable à de nouveaux investissements et à la croissance économique, par un phénomène de surendettement. Selon l'ampleur de la dette extérieure, les investisseurs éventuels, nationaux et étrangers peuvent s'abstenir d'investir de crainte que le moindre bénéfice qu'ils réalisent ne soit taxé par l'État afin d'assurer le service de ses dettes existantes. Cette répugnance à effectuer des investissements intérieurs peut aussi s'accompagner d'une fuite de capitaux et d'une hausse considérable des taux d'intérêt au pays. Qui plus est, le gouvernement d'un tel pays peut ne pas être intéressé à assainir ses politiques, étant donné que toute amélioration de la balance des paiements qui pourrait en résulter profiterait en grande partie, pendant un certain temps, à ses créanciers. Dans de telles circonstances, on soutient que la réduction de la dette conjuguée à des politiques économiques saines peut ouvrir la voie à un accroissement des investissements et à une expansion économique en réduisant l'incertitude, augmentant ainsi la capacité du pays d'assurer le service de sa dette restante. La hausse des prix sur le marché secondaire qui s'ensuivra peut accroître la valeur marchande des créances restantes et, peut-être, compenser avantageusement le coût que subissent les créanciers du fait de la réduction de la dette. Par conséquent, tant les créanciers que les débiteurs peuvent, dans certains cas, sortir gagnants d'une réduction de la dette.

Toutefois, l'efficacité de la réduction de la dette comme moyen de stimuler la croissance ne fait pas l'unanimité. Certains observateurs font valoir qu'une dette extérieure importante constitue un effet et non une cause de faible croissance économique et contestent l'existence même du phénomène de surendettement

private investment may not be materially reduced by debt reduction. Finally, debt reduction may involve a moral hazard: by granting debt reduction to some countries, the willingness of other countries to continue servicing their external debts may be affected.

Notwithstanding this latter view, the weight of world opinion has come to favour the position that large external debts can act as a disincentive to investment and as an obstacle, therefore, to growth. This view is an integral part of the strengthened international debt strategy proposed in the Brady initiative.

### **Implementing the strengthened debt strategy**

The Brady initiative received widespread support from the international community. The IMF and the World Bank agreed in May 1989 to set aside resources out of existing programs available to member countries to facilitate debt-reduction operations. As well, both institutions agreed to make additional resources available to "support" (i.e., guarantee) interest payments associated with transactions involving debt and debt-service reduction.

Since debt reduction is potentially a "win-win" proposition for both severely indebted countries and commercial creditors, the need for public sector involvement could be questioned. In practice, however, it is difficult to identify which countries in actual fact have debt overhangs and therefore there may be legitimate differences of opinion as to the merits of debt reduction for particular countries. In these cases, official resources may provide the catalyst for banks to part with their claims at a significant discount. Furthermore, since gains from reducing a debt overhang will accrue to all bank creditors, regardless of whether they participate in debt reduction or not, official involvement may be needed to encourage full bank participation and to discourage "free-riding." Finally, the provision of official resources to facilitate commercial debt reduction may be viewed as a means of sharing the burden among different groups of creditors.

Including funds provided by Japan, up to U.S.\$35 billion was made available by the international community to finance commercial debt and debt-service reduction in severely indebted

dans la plupart des pays en développement. Ils soulignent le fait que la croissance des pays latino-américains lourdement endettés avait chuté avant même que n'éclate la crise de la dette en 1982. D'autres soutiennent qu'il serait peut-être préférable qu'un pays lourdement endetté utilise les ressources libérées pour investir plutôt que pour réduire sa dette. On s'est aussi dit préoccupé par la possibilité que les pays en développement n'utilisent pas dans des projets d'investissement les économies réalisées grâce à la réduction de la dette. En outre, à moins qu'une partie importante des dettes extérieures d'un pays lourdement endetté ne soit effacée, les créances bancaires restantes continueront de s'échanger avec une décote appréciable sur le marché secondaire. Dans de telles conditions, il se peut que l'investissement privé ne soit pas davantage encouragé du fait de la réduction de la dette. Enfin, la réduction de la dette peut comporter un risque d'ordre moral : en effet, l'acquiescement à la réduction de la dette de certains pays peut rendre d'autres pays moins disposés à continuer d'assurer le service de leur dette extérieure.

En dépit de ce dernier point de vue, l'opinion mondiale en est venue à accorder un appui considérable à la position selon laquelle une dette extérieure importante peut décourager l'investissement et, par conséquent, freiner toute croissance économique. Cette opinion fait partie intégrante de la stratégie internationale renforcée de la dette que propose le Plan Brady.

### **Mise en oeuvre de la stratégie renforcée de la dette**

Le Plan Brady a reçu un large appui au sein de la communauté internationale. Le FMI et la Banque mondiale ont convenu en mai 1989 de consacrer une partie des ressources destinées aux pays membres dans le cadre de programmes existants à des opérations de réduction de la dette. En outre, les deux institutions ont accepté de dégager des ressources additionnelles afin d'« appuyer » (c'est-à-dire de garantir) les paiements d'intérêts liés aux opérations de réduction de l'encours et du service de la dette.

Étant donné que la réduction de la dette est une opération qui profite tant aux pays lourdement endettés qu'aux créanciers commerciaux, on pourrait se demander si des concours de sources publiques sont nécessaires. Il est toutefois difficile dans la pratique de déterminer quels pays sont effectivement surendettés, ce qui explique que les opinions puissent diverger quant aux mérites de la réduction de la dette dans le cas de certains pays. Dans le cas de ces pays, des ressources officielles peuvent inciter les banques à se départir de leurs créances à des prix bien en deçà de la valeur nominale. Au surplus, comme toutes les banques créancières profiteront d'une réduction du surendettement, qu'elles prennent part ou non à la réduction de la dette, une participation

developing countries. Up to 40 such countries – those that have rescheduled their bank claims or for whom financial packages have been assembled in the 1983-88 period – were widely considered possible recipients of official resources to facilitate debt and debt-service reduction.

### *Negotiations begin*

Immediately after the IMF and the World Bank agreed to provide resources along the lines suggested by the Brady initiative, negotiations with Mexico began. Negotiations with Costa Rica and the Philippines followed in short order. While discussions between these countries and their bank advisory committees, which negotiate on behalf of creditor banks, were often long and, in the case of Mexico, very difficult, the first agreements-in-principle were reached in mid-1989. After receiving approval by creditor banks at large, these agreements were implemented in early 1990.<sup>8</sup>

At the time of writing (autumn 1990), other countries are in various stages of the process. Most advanced is Venezuela which, after qualifying for IMF and World Bank resources last year, reached an agreement-in-principle with its bank creditors on a medium-term financial package in March 1990. The deal is expected to be signed by all bank creditors before the end of the year. The IMF has also agreed to set aside resources out of Ecuador's program to finance debt-reduction operations for that country. However, Ecuador has not yet reached an agreement with its commercial banks on a debt-reduction package. Conversely, Morocco and Uruguay have reached agreements-in-principle with their bank creditors on debt-reduction packages, but have not yet arranged the required financing. Still more countries (e.g., Argentina) have indicated that they will be seeking commercial debt reduction in the months ahead.

### *A menu approach*

The packages negotiated to date are broadly similar; each contains a "menu of options" involving debt and debt-service reduction, tailored to the specific needs of the debtor country and its creditors. Most also provide a new-money option, under which

officielle peut s'avérer nécessaire afin d'encourager la collaboration active des banques et de décourager le resquillage. Enfin, l'apport de ressources officielles visant à faciliter la réduction de la dette envers les banques commerciales peut être perçu comme une façon de répartir le fardeau de cette réduction entre différents groupes de créanciers.

Si l'on tient compte de l'apport financier du Japon, la communauté internationale a mobilisé jusqu'à 35 milliards de dollars É.-U. en vue de financer la réduction de l'encours et du service de la dette envers les banques commerciales dans les pays en développement lourdement endettés. Pas moins de quarante de ces pays, soit ceux qui avaient rééchelonné leurs prêts bancaires ou pour lesquels des montages financiers avaient été effectués entre 1983 et 1988, ont été généralement jugés admissibles aux ressources officielles visant à faciliter la réduction de l'encours et du service de la dette.

### *Amorce des négociations*

Immédiatement après que le FMI et la Banque mondiale eurent convenu de fournir des ressources conformément aux suggestions formulées dans le Plan Brady, des négociations ont été amorcées avec le Mexique. Des négociations ont suivi peu de temps après avec le Costa Rica et les Philippines. Même si les discussions entre ces pays et les comités consultatifs qui négociaient au nom des banques créancières ont souvent été longues et, dans le cas du Mexique, très ardues, les premières ententes de principe ont été conclues au milieu de 1989. Ayant reçu la caution de l'ensemble des banques créancières, ces ententes ont pris effet au début de 1990<sup>8</sup>.

Au moment de la rédaction du présent article (automne 1990), d'autres pays en sont à diverses étapes du processus. Le Venezuela est au stade le plus avancé : après avoir été jugé admissible aux ressources du FMI et de la Banque mondiale l'an dernier, ce pays a conclu avec ses banques créancières en mars 1990 une entente de principe portant sur un montage financier à moyen terme. L'entente devrait être signée par tous les créanciers d'ici la fin de l'année. Le FMI a aussi accepté de prélever sur le programme de l'Équateur des ressources en vue de financer les opérations de réduction de la dette de ce pays. Toutefois, l'Équateur n'est pas encore parvenu à une entente avec les banques commerciales concernées sur un montage financier visant la réduction de sa dette. Inversement, le Maroc et l'Uruguay ont conclu des ententes de principe avec leurs banques créancières sur la réduction de leur dette, mais n'ont pas encore pris des dispositions pour le financement requis. D'autres pays encore (l'Argentine par exemple) ont indiqué leur intention de conclure des ententes

<sup>8</sup> Chile engaged in a debt buy-back operation in November 1989 using in part set-aside resources provided by the World Bank. This buy-back operation had been negotiated with the commercial banks in 1988, prior to the Brady initiative.

<sup>8</sup> Le Chili s'est engagé en novembre 1989 dans une opération de rachat de dettes, utilisant notamment pour cela des ressources fournies par la Banque mondiale. Cette opération avait été négociée en 1988 avec les banques commerciales, avant que le Plan Brady n'intervienne.

banks could make new loans instead of providing debt or debt-service reduction. This menu approach developed in response to differing preferences among creditor banks for debt and debt-service reduction. In addition to varying views on a debtor country's medium-term prospects, the strength of a bank's capital base and the extent of loan-loss provisions may cause a bank to prefer one option over another. The tax, accounting and regulatory environments in which a bank operates may also influence a bank's selection among various options.

### *Different approaches*

Several different types of debt and debt-service reducing transactions have been negotiated. The most straightforward method of reducing principal obligations is a *debt buy-back*. Under a debt buy-back, a country buys its existing debts from creditor banks at a negotiated discount. Official resources could be used in such buy-back operations. A *debt exchange* is another approach. Here, a debtor offers banks a new instrument, such as bonds, in exchange for the banks' existing claims on the country, again at a negotiated discount. These *discount bonds* may be "enhanced" through guarantees on the repayment of the remaining principal. Under this approach, official resources provided to support debt-reduction operations could be used to acquire foreign currency zero-coupon bonds, issued by industrial countries, designed to mature at the same time as the bonds received by banks in exchange for their old claims. Additional enhancements could take the form of limited, one- to two-year, interest guarantees on a "rolling basis." In other words, the interest guarantee would be activated only in the event that the debtor stopped making interest payments. Otherwise, the guarantee would be deferred, or rolled forward.

Debt-service reduction can also take a variety of forms. Existing bank claims can be exchanged for a new instrument, such as a bond, on a dollar-for-dollar basis, but with a concessional rate of interest. This is known as a *par bond exchange*. Similar to discount bonds, described above, par bonds may be collateralized with respect to principal and, to a limited extent, interest payments. *Temporary interest rate reduction* is another variant under which creditors grant a concessional interest rate to a debtor for a limited period of time.

visant la réduction de leur dette envers les banques commerciales dans les mois à venir.

### *Les menus d'options*

Les montages financiers négociés jusqu'à maintenant se ressemblent dans les grandes lignes; chacun comporte un menu d'options qui permet des allègements de l'encours et du service de la dette et qui est adapté aux besoins particuliers du pays débiteur et de ses créanciers. La plupart de ces montages comprennent aussi une option d'apport d'argent frais, en vertu de laquelle les banques peuvent consentir de nouveaux prêts au lieu de se limiter aux formules de réduction de l'encours et du service de la dette. Ces menus d'options ont été élaborés pour répondre aux diverses préférences des créanciers bancaires en matière de réduction de l'encours et du service de la dette. Outre le fait qu'elles peuvent différer d'opinion quant aux perspectives de croissance à moyen terme du pays débiteur, les banques créancières peuvent être amenées, selon la solidité de leur assise financière et l'ampleur de leurs provisions pour pertes, à accorder la préférence à une option plutôt qu'à une autre. Les régimes fiscaux, comptables et réglementaires auxquels elles sont assujetties peuvent aussi influencer leur choix.

### *Les différentes opérations d'allègement de la dette*

Différents types d'opérations de réduction de l'encours et du service de la dette ont été négociés. La technique la plus courante pour alléger le fardeau des obligations liées au principal est le *rachat de dettes*. Elle consiste, pour un pays débiteur, à racheter avec décote l'encours de ses dettes auprès des banques créancières. Ce type d'opération peut être financé par des ressources officielles. L'*échange de dettes* est une autre opération par laquelle un pays débiteur cède aux banques, toujours avec décote, un nouvel instrument tel que des obligations en échange des créances que ces banques détiennent sur lui. La valeur de ces *obligations vendues avec décote* peut être rehaussée par des garanties de remboursement du solde du principal; par exemple, les ressources officielles disponibles pour la réduction de la dette pourraient être affectées à l'achat d'obligations à coupon zéro libellées en devises étrangères, émises par des pays industriels et échéant à la même date que les obligations reçues par les banques en échange de leurs anciennes créances. Des garanties reconductibles de paiements d'intérêts, d'une durée de un ou deux ans, pourraient aussi être offertes pour rehausser l'attrait de ce type d'opération. Ces garanties ne seraient appliquées que si le débiteur cessait d'effectuer ses paiements d'intérêts et, dans le cas contraire, seraient tout simplement reconduites.

Il existe aussi différents mécanismes de réduction du service de la dette. Des

## The results

The strengthened debt strategy has been effective in encouraging voluntary, market-based debt and debt-service reduction. So far, financing packages involving debt and debt-service reduction have been arranged for countries that account for approximately 45 per cent of the outstanding medium- and long-term bank debt of the fifteen most heavily indebted developing countries. This is an impressive achievement. Arrangements with other countries will certainly follow over the coming months.

Whether the debt strategy will meet its ultimate objective of greater investment and real growth in severely indebted countries is less clear. Empirical evidence supporting the theoretical case for debt reduction is limited. As noted earlier, there is also a risk that without the maintenance of sound domestic policies, the gains from debt reduction may be wasted.

Early results from Mexico provide some encouragement. Immediately after the announcement that an agreement-in-principle had been reached between Mexico and creditor banks on debt and debt-service reduction, nominal short-term interest rates declined by 22 percentage points (from 56 per cent to 34 per cent) on an annual basis. This reflected improved investor confidence in the economy, some return of flight capital and declining inflationary expectations. Moreover, stronger-than-expected investment and growth recorded by Mexico in 1989 may in part be attributable to the debt-reduction package. As well, certain Mexican borrowers are able to borrow again from international bond markets.

Despite these favourable indications, it is still not clear the extent to which the improvement in the Mexican economy should be attributed to the introduction of sound, credible economic policies by the Mexican authorities rather than to debt reduction. Higher-than-anticipated oil prices also provided an unexpected windfall. Critics of the Mexican package also note that the cash-flow benefits of the deal are relatively small in terms of Mexico's GDP and that they could be wiped out by higher international interest rates or lower oil prices.

In Costa Rica and the Philippines, the other two countries that have implemented debt-reduction programs under the Brady initiative, the impact of debt reduction on economic prospects is even harder to discern, though perhaps insufficient time has

créances bancaires peuvent être échangées, pour une valeur nominale égale, contre un nouvel instrument (une obligation par exemple) assorti d'un taux de faveur. Cette opération porte le nom d'*échange d'obligations au pair*. Comme c'est le cas pour les obligations vendues avec décote dont il a été question ci-dessus, le paiement du principal et, dans une certaine mesure, des intérêts relatifs aux obligations au pair peut être garanti. Un autre mécanisme est la *réduction temporaire de taux d'intérêt*, en vertu de laquelle les créanciers consentent un taux de faveur à un débiteur pour une période de temps limitée.

## Les résultats

Le renforcement de la stratégie de la dette a réussi à favoriser une réduction volontaire de l'encours et du service de la dette en fonction de la valeur de celle-ci sur les marchés. Jusqu'à maintenant, des montages financiers facilitant la réduction de l'encours et du service de la dette ont été réalisés pour différents pays dont l'endettement représente environ 45 % de l'encours de la dette bancaire à moyen et à long terme du groupe des quinze pays en développement les plus lourdement endettés. C'est là une réussite impressionnante. Il ne fait aucun doute qu'au cours des prochains mois des arrangements analogues seront pris avec d'autres pays.

Il reste toutefois à savoir si la stratégie relative à la dette parviendra à atteindre son objectif ultime, qui est d'améliorer les perspectives d'investissement et de croissance des pays lourdement endettés. Les preuves empiriques corroborant le bien-fondé de la stratégie de la réduction de la dette sont peu nombreuses. De plus, comme nous l'avons fait remarquer précédemment, les gains générés par la réduction de la dette risquent d'être gaspillés si de saines politiques intérieures ne sont pas maintenues.

Les premiers résultats qui nous proviennent du Mexique sont plutôt encourageants. Au lendemain de l'annonce de l'entente de principe intervenue entre ce pays et ses banques créancières sur la réduction de l'encours et du service de sa dette, les taux d'intérêt nominaux à court terme ont chuté de 22 points de pourcentage (passant de 56 à 34 %). Cette baisse de taux reflétait la confiance accrue des investisseurs dans l'économie, le rapatriement d'une partie des capitaux enfuis et l'atténuation des attentes inflationnistes. L'adoption du programme de réduction de la dette pourrait aussi expliquer en partie la vigueur inattendue que les investissements et la croissance ont affichée au Mexique en 1989. Il faut signaler également que certains emprunteurs mexicains sont de nouveau à même d'emprunter sur les marchés obligataires internationaux.

On ne peut toujours pas établir, à partir de ces signes encourageants, dans quelle mesure l'amélioration de la tenue de l'économie du Mexique peut être

elapsed to permit an assessment. In Costa Rica, debt reduction may yet have the desired effects on confidence, though it has not had a positive cash-flow impact on the country's external finances. Prior to the debt agreement, Costa Rica was paying roughly U.S.\$11 million per quarter to commercial banks in interest payments on medium- and long-term debt – equivalent to less than 30 per cent of the amount due. After debt reduction, Costa Rica will be paying approximately the same amount, if not slightly more, to commercial banks.<sup>9</sup> Costa Rica will also have to pay interest to the official creditors that provided the resources used to finance the buy-backs.

In the Philippines, real growth in 1990, the first year of the debt-reduction package, is expected to fall far short of the 5.6 per cent figure recorded in 1989. While this outcome would reflect in part the effects of the earthquake that occurred during the summer, as well as recent increases in oil prices, the authorities had acknowledged the likelihood of slower growth before these developments. The continuing political uncertainty in the Philippines may also be clouding that country's prospects and obscuring the benefits of debt reduction.

## The future

Where does the international debt strategy go from here?

Notwithstanding the Brady initiative, which has achieved much in a relatively short time, there is some concern that still more may need to be done. In particular, it is uncertain that developing countries, even after negotiated bank-debt reduction, will have access to sufficient external resources to maintain a satisfactory rate of real growth. Even if sound domestic economic policies are pursued over the medium term, commercial banks are likely to continue to remain cautious about lending to developing countries, given their recent experience. Similarly, there are no assurances that there will be a timely return of flight capital or a large increase in foreign investment. As a consequence, the scale of debt reduction so far achieved may be insufficient to stem the outflow of resources from heavily indebted developing countries. As well, a number of seriously indebted middle-income countries, with large debts to official creditors rather than to banks, cannot

attribuée à l'adoption par les autorités de ce pays de politiques économiques saines et crédibles plutôt qu'à la réduction de la dette. Il ne faut pas oublier non plus que le renchérissement inattendu du pétrole s'est révélé une véritable manne. Les détracteurs du programme mexicain font remarquer aussi que les avantages que présente celui-ci au chapitre des besoins de trésorerie sont relativement peu importants, par rapport au PIB du Mexique, et pourraient être complètement neutralisés par une hausse des taux d'intérêt internationaux ou par une baisse des cours du pétrole.

Au Costa Rica et aux Philippines, les deux autres pays qui ont mis en place des programmes de réduction de la dette en vertu du Plan Brady, l'incidence de ces programmes sur les perspectives économiques est encore plus difficile à évaluer, mais il est peut-être trop tôt à l'heure actuelle pour se prêter à un tel exercice. Au Costa Rica, le programme de réduction de la dette pourrait encore produire l'effet souhaité sur le plan de la promotion de la confiance, et ce même s'il n'a pas amélioré, au chapitre des besoins de trésorerie, la position financière extérieure du pays. Avant de conclure une entente avec ses créanciers, le Costa Rica versait chaque trimestre aux banques commerciales des intérêts totalisant environ 11 millions de dollars E.-U. sur sa dette à moyen et à long terme, soit moins de 30 % de la somme exigible. Une fois sa dette réduite, le Costa Rica versera aux banques commerciales un montant à peu près équivalent, ou même légèrement supérieur<sup>9</sup>. Ce pays devra aussi payer des intérêts aux organismes publics qui ont fourni les ressources nécessaires au financement des opérations de rachat de ses créances.

Aux Philippines, la croissance devrait, en 1990, soit la première année d'existence du programme de réduction de la dette, être bien inférieure au taux de 5,6 % enregistré en 1989. Un tel résultat pourrait être imputable en partie aux repercussions du tremblement de terre de cet été de même qu'aux récentes hausses du cours du pétrole. Toutefois, les autorités philippines avaient reconnu, avant que ces facteurs n'entrent en jeu, qu'un ralentissement de la croissance était probable. Par ailleurs, il se peut que l'incertitude politique persistante qui règne aux Philippines obscurcisse les perspectives économiques et dilue les bienfaits de la réduction de la dette.

## L'avenir

Dans quel sens la stratégie internationale de la dette évoluera-t-elle? En dépit des progrès que le Plan Brady a permis d'accomplir en assez peu de temps, on peut se demander s'il ne faudra pas faire davantage encore. Il n'est pas sur, notamment, que les pays en développement, même après la réduction négociée

<sup>9</sup> This is based on a residual stock of medium- and long-term bank debt of U.S.\$800 million at 6.24 per cent interest.

<sup>9</sup> Chiffre calculé en fonction des dettes restantes à moyen et à long terme de 800 millions de dollars E.-U., à un taux de 6,24 %.

benefit from a strengthened debt strategy that focusses on a reduction of debts owed to commercial banks.

### *Options*

While greater domestic adjustment and an increased reliance on domestic savings must be one answer to the problem of insufficient resources, greater official involvement may well be the next logical step in the debt strategy. There are two possible, and not necessarily exclusive, approaches. First, official creditors could increase the pace of their own lending to severely indebted countries. Alternatively, official debt reduction could be undertaken.

To date, official lenders have clearly favoured the first option. New lending, particularly by export promotion agencies in industrial countries, has become an increasingly important source of funds for those severely indebted middle-income developing countries that are pursuing sound macroeconomic policies and structural adjustment. Paris Club creditors have rescheduled principal and, in some cases, interest, and are willing to continue lending to these countries. The preference for new lending reflects, among other things, the concern that official debt reduction might jeopardize the provision of new export credits and guarantees.

Multilateral lenders, such as the IMF and the World Bank, have made additional arguments against their own participation in debt reduction. The Fund points out that debt reduction would be inconsistent with its role as a co-operative institution that makes loans to members on a relatively short-term revolving basis. Moreover, the IMF, at the centre of the international financial system, functions much like a lender of last resort and hence should be a privileged creditor. The World Bank argues that if it participated in debt reduction, its credit rating might be impaired, raising its cost of funds. This in turn would have to be passed down to borrowing countries. Given their special nature, both the IMF and the World Bank have been informally accorded a priority status over other creditors.

Recently, however, some government creditors have been more willing to consider the reduction of their claims on developing countries. In part, this may reflect a concern that some of their loans to developing countries may not be repaid in full. Further, it

de leur dette bancaire, aient accès à suffisamment de ressources externes pour maintenir un taux satisfaisant de croissance. Compte tenu de leur expérience récente, les banques commerciales continueront probablement d'user de prudence dans l'octroi de prêts aux pays en développement, même si ceux-ci appliquent des politiques économiques intérieures saines dans le moyen terme. En outre, il n'existe aucune garantie qu'un rapatriement des capitaux enfuis ou une forte augmentation des investissements étrangers survienne à point nommé. Par conséquent, il se peut que les progrès réalisés jusqu'à maintenant dans la réduction de la dette ne suffisent pas à endiguer les sorties de fonds hors des pays en développement surendettés. De plus, un certain nombre de pays à revenu moyen lourdement endettés, qui ont de grosses dettes envers les créanciers officiels, et non envers les banques, ne pourront tirer avantage d'une stratégie renforcée axée sur la réduction de l'endettement bancaire.

### *Les options*

L'amélioration de l'ajustement interne et le recours accru à l'épargne intérieure constituent certes un élément de réponse au manque de ressources; mais il se peut que la prochaine étape logique de la stratégie de la dette consiste en un accroissement de la participation des créanciers officiels. À ce propos, deux méthodes, qui ne s'excluent pas nécessairement, peuvent être adoptées. La première veut que les créanciers officiels accroissent le rythme auquel ils consentent des crédits aux pays lourdement endettés. La seconde méthode consiste dans la mise en oeuvre de stratégies de réduction de la dette envers les créanciers officiels.

Jusqu'à maintenant, les prêteurs officiels ont montré une nette préférence pour la première option. Les nouveaux prêts, particulièrement ceux qui sont consentis par les organismes d'aide à l'exportation établis dans les pays industriels, sont devenus une source de fonds de plus en plus importante pour les pays en développement à revenu moyen lourdement endettés qui sont engagés dans un programme d'ajustement structurel et qui appliquent des politiques macroéconomiques saines. Les créanciers du Club de Paris ont effectué le rééchelonnement de paiements de principal et, dans certains cas, d'intérêts et demeurent disposés à consentir des prêts à ces pays. La préférence accordée à l'octroi de nouveaux prêts reflète, entre autres choses, le fait que l'on craint que les opérations de réduction de la dette envers les créanciers officiels nuisent à la fourniture de nouveaux crédits à l'exportation et des garanties afférentes.

Les bailleurs de fonds multilatéraux, comme le FMI et la Banque mondiale, ont apporté d'autres arguments pour appuyer leur décision de ne pas participer aux opérations de réduction de la dette. Le Fonds signale qu'une telle

may reflect recognition of the fact that, to the extent that there is an economic justification for debt reduction, it applies to public as well as private creditors.

In 1988, at the Toronto Economic Summit, the seven major industrial countries agreed to provide a measure of debt and debt-service relief to the very poor, debt-distressed region of sub-Saharan Africa through Paris Club negotiations. This has become known as the granting of "Toronto terms."<sup>10</sup> In early 1990, Toronto terms were extended to very poor countries outside of Africa.

In September 1990, the Paris Club agreed to reschedule commercial loans extended by official lenders to eligible lower middle-income countries over a period of 15 years with a maximum grace period of 8 years. Previously, the standard rescheduling terms of the Paris Club for these countries were 10 years with a grace period of up to 6 years. It was also agreed that concessional aid loans would be repaid over 20 years with a maximum grace period of 10 years. Furthermore, inspired by the "Enterprise for the Americas" initiative announced by the United States in late June, approval was granted to allow creditor countries to engage in debt-for-nature, debt-for-aid, debt-for-equity swaps or other local currency conversions on a voluntary basis.

Paris Club participants have also announced that other debt-alleviating measures are under consideration. For the poorest countries, more extensive reductions in debt or debt service than currently available under Toronto terms are now being discussed. With respect to middle-income countries, both the World Bank and the IMF have publicly supported the participation of creditor governments in debt reduction. Former Italian Prime Minister Bettino Craxi, as the U.N. Secretary General's special representative on debt, outlined in June 1990 a plan to address the debt problems of middle-income developing countries. Among his proposals was the cancellation of concessional aid loans for the

participation serait incompatible avec son rôle d'institution de coopération économique et financière qui consent à ses membres des prêts renouvelables à assez court terme. Qui plus est, le FMI, qui se trouve au cœur du système financier international, agit dans une grande mesure comme un prêteur de dernier ressort et, à ce titre, devrait être considéré comme un créancier privilégié. Pour sa part, la Banque mondiale soutient que si elle participait aux opérations de réduction de la dette, sa cote de crédit pourrait baisser, ce qui ferait augmenter le coût de ses emprunts. Cette hausse se répercuterait forcément sur les pays emprunteurs. Compte tenu de leur caractère particulier, tant le FMI que la Banque mondiale se sont vu officiellement accorder un statut privilégié par rapport aux autres créanciers.

Ces derniers temps, un certain nombre de gouvernements créanciers se sont montrés davantage disposés à envisager une réduction de leurs créances sur les pays en développement. Cela s'explique peut-être en partie par leur crainte de ne pas recouvrer intégralement certaines de ces créances. Mais peut-être aussi a-t-on admis que, si la réduction de la dette se justifie sur le plan économique, elle devrait être acceptable à la fois pour les créanciers publics et les créanciers privés.

Au sommet économique de Toronto, en 1988, les sept grands pays industriels se sont entendus pour alléger, par le truchement des négociations du Club de Paris, le fardeau de la dette et du service de la dette des pays africains très pauvres et surendettés situés au sud du Sahara. Cette entente a donné lieu à l'octroi des « conditions de Toronto », comme on les appelle maintenant<sup>10</sup>. Au début de 1990, les conditions de Toronto ont également été accordées à des pays non africains très pauvres.

En septembre 1990, les membres du Club de Paris ont convenu de rééchelonner sur une période de 15 ans, avec un délai de grâce maximal de 8 ans, le remboursement des crédits commerciaux consentis par des prêteurs officiels aux pays à revenu moyen-inférieur admissibles. Auparavant, les conditions standard du Club de Paris pour ces pays prévoyaient le rééchelonnement des dettes sur une période de 10 ans, avec un délai de grâce ne pouvant dépasser 6 ans. Il a aussi été décidé que les crédits d'aide concessionnelle seraient remboursés sur une période de 20 ans, avec un délai de grâce maximal de 10 ans. Qui plus est, sous l'inspiration de l'initiative dite

<sup>10</sup> Under Toronto terms, a creditor country may choose one of three options: i) a one-third write-off of debt service due during a period under review (the consolidation period), typically one to two years, with the remainder rescheduled at market interest rates over 14 years with a grace period of 8 years; ii) the rescheduling of debt service due at a concessional interest rate of one-half market rates or a rate 3.5 percentage points below market, whichever is lower, over 14 years with a grace period of 8 years; or iii) the rescheduling of debt service due over 25 years with a grace period of 14 years at market interest rates.

<sup>10</sup> En vertu des conditions de Toronto, le pays créancier peut choisir l'une des trois options suivantes : i) la radiation d'un tiers des paiements liés au service de la dette exigibles durant une période donnée ou période de consolidation), d'une durée habituelle de un à deux ans, et le rééchelonnement des deux autres tiers aux taux d'intérêt du marché sur une période de 14 ans, avec un délai de grâce de 8 ans; ii) le rééchelonnement des paiements liés au service de la dette exigible à des taux d'intérêt concessionnels inférieurs à ceux du marché de moitié ou de 3,5 points de pourcentage, selon le chiffre le plus faible, sur une période de 14 ans, avec un délai de grâce de 8 ans; ou iii) le rééchelonnement des paiements liés au service de la dette exigible aux taux d'intérêt du marché sur une période de 25 ans, avec un délai de grâce de 14 ans.

very poorest and the extension of Toronto-type terms to middle-income countries according to the different levels of development and indebtedness of the countries concerned. The Craxi Report was noted at the July 1990 Houston Economic Summit and the seven major industrial countries agreed to study its recommendations.

« Entreprise pour les Amériques » annoncée par les États-Unis vers la fin juin, les pays créditeurs ont été autorisés à s'engager volontairement dans des conversions de créances en participations, en aide au développement ou en aide à la préservation de la nature ou dans d'autres types de conversions de créances en monnaie locale.

Les membres du Club de Paris ont également annoncé qu'ils envisagent l'adoption d'autres mesures d'allègement de la dette. La possibilité de faire bénéficier les pays les plus démunis de réductions de l'encours et du service de leur dette encore plus importantes que celles permises en ce moment par les conditions de Toronto fait actuellement l'objet de discussions. En ce qui concerne les pays à revenu moyen, tant la Banque mondiale que le FMI ont publiquement appuyé la participation des gouvernements créditeurs aux efforts de réduction de la dette. En qualité de représentant spécial du secrétaire général de l'ONU pour les questions de la dette internationale, Bettino Craxi, ancien premier ministre de l'Italie, a exposé en juin 1990 un plan s'attaquant aux problèmes d'endettement des pays en développement à revenu moyen. Ses propositions prévoyaient notamment l'annulation des apports de crédits d'aide concessionnelle aux pays les plus pauvres et l'octroi de conditions du même type que celles de Toronto aux pays à revenu moyen, en fonction des différents niveaux de développement et d'endettement des pays concernés. Le rapport Craxi a été présenté au sommet économique de Houston en juillet 1990 et les sept grands pays industriels ont accepté d'en étudier les recommandations.

## APPENDIX

### Medium-term debt and debt-service reduction agreements

#### *Mexico*

In the case of Mexico, commercial banks holding some U.S.\$48.5 billion in medium- and long-term claims were offered three options: to exchange existing medium- and long-term claims for new bonds at a discount of 35 per cent with a floating market-related interest rate; to exchange existing claims for new bonds at par with a fixed 6.25 per cent rate of interest (roughly 350 basis points below market rates prevailing at that time); or to provide new loans equivalent to 25 per cent of their existing Mexican claims over the four-year 1989-92 period. If Mexican oil

## ANNEXE

### Accords visant la réduction de l'encours et du service de la dette à moyen terme

#### *Mexique*

Dans le cas du Mexique, trois choix s'offraient aux banques commerciales qui détenaient des créances sur ce pays à moyen et à long terme totalisant quelque 48,5 milliards de dollars É.-U. : échanger les créances en question contre de nouvelles obligations vendues avec une décote de 35 % et assorties d'un taux d'intérêt variable lié à l'évolution du marché; échanger, au pair, les créances existantes contre de nouvelles obligations assorties d'un taux d'intérêt fixe de 6,25 % (environ 350 points de base sous les taux du marché du moment); consentir de nouveaux prêts équivalant à 25 % de leurs créances mexicaines existantes sur une période de quatre ans, allant de 1989 à 1992. Si les revenus

export earnings exceed a certain reference level after July 1996, banks participating in debt and debt-service reduction could recover some of the losses sustained. Resources provided by the IMF, the World Bank, Japan and by Mexico out of its own reserves, were used to collateralize principal payments and to supply a rolling interest guarantee equivalent of up to 18 months on both the discount and par bonds.

Banks holding 48 per cent of eligible medium- and long-term claims chose par bonds with the concessional rate of interest; banks holding 43 per cent opted for the discount bonds; while the remaining banks, holding 9 per cent of the outstanding debt, chose the new-money option. An agreement to this effect was signed in early February 1990 between Mexico and virtually all its commercial bank creditors.

Mexico's gross interest savings as a result of the financing arrangement with creditor banks amount to about U.S.\$1.3 billion per year over the 1989-92 period. Including new loans, gross inflows will average roughly U.S.\$1.7 billion per year, or 0.8 per cent of Mexico's GDP. In addition, the bond exchange effectively restructures principal payments to the year 2020, the year the new bonds will mature. Therefore, the total cash-flow relief to Mexico as a result of the commercial bank financing package will average about U.S.\$3.7 billion per year, or 1.8 per cent of GDP. As well, the arrangement eliminates about U.S.\$7 billion of Mexico's commercial debt, though Mexico has borrowed U.S.\$5.7 billion of official funds for enhancements, and provides the country some protection against increases in international interest rates.

### *Philippines*

By comparison with the Mexican package, the Philippines arrangement was structured very simply. It placed somewhat greater emphasis on new lending than on debt reduction. Banks had a choice between selling their loans back to the Philippines at a 50 per cent discount or providing new loans.

At the beginning of January 1990, the debt buy-back portion of the package was implemented. A total of U.S.\$1.3 billion in existing bank claims was acquired by the Philippines, using resources supplied in large part by the IMF, the World Bank and Japan. Further debt and debt-service reduction operations are

que le Mexique tire de l'exportation du pétrole dépassent un certain niveau de référence après juillet 1996, les banques qui participent à l'opération de réduction de l'encours et du service de la dette de ce pays pourraient recouvrer une partie de leurs pertes. Les concours du FMI, de la Banque mondiale, du Japon et les ressources que le Mexique a puisées à même ses propres réserves ont servi de nantissement au remboursement du principal et de garantie reconductible de paiement des intérêts pour une période maximale de 18 mois, tant sur les obligations vendues avec décote que sur les obligations au pair.

Un groupe de banques détenant 48 % des créances à moyen et à long terme admissibles a opté pour les obligations au pair assorties d'un taux de faveur; un autre groupe, dont les créances comptaient pour 43 % de l'ensemble, a choisi les obligations vendues avec décote, tandis que les banques restantes, qui détenaient 9 % de l'encours de la dette, ont préféré l'injection d'argent frais. Le Mexique a signé un accord à cet effet au début de février 1990 avec presque tous ses créanciers bancaires commerciaux.

Les économies brutes d'intérêts que permet de réaliser le montage financier conclu par le Mexique avec ses créanciers bancaires s'élèvent à environ 1,3 milliard de dollars É.-U. par année sur la période 1989-1992. Les rentrées brutes, nouveaux prêts inclus, atteindront en moyenne approximativement 1,7 milliard de dollars É.-U. par année, soit 0,8 % du PIB du Mexique. De plus, les opérations d'échange d'obligations ont effectivement permis de rééchelonner les paiements du principal, ce jusqu'en 2020, année où les nouvelles obligations arriveront à échéance. Par conséquent, l'apport total de liquidités au Mexique résultant du montage financier mis au point avec les banques commerciales totalise en moyenne quelque 3,7 milliards de dollars É.-U. par année, soit 1,8 % du PIB. L'accord supprime également environ 7 milliards de dollars É.-U. de la dette du Mexique envers les banques commerciales – quoique ce dernier ait dû emprunter 5,7 milliards de dollars É.-U. de fonds publics pour couvrir les garanties – et offre au pays une certaine protection contre les hausses des taux d'intérêt internationaux.

### *Philippines*

Si on le compare au montage financier mis au point pour le Mexique, l'accord conclu avec les Philippines est très simplement structuré. L'accent porte davantage sur l'apport d'argent frais que sur la réduction de la dette. Les banques avaient le choix entre revendre leurs créances aux Philippines avec une décote de 50 % ou consentir de nouveaux prêts.

Au début de janvier 1990, l'opération de rachat de dettes comprise dans le montage financier a été lancée. Les Philippines ont fait l'acquisition d'un total

being contemplated. At the end of February, the new-money loan agreement was signed. Total new-money commitments to be provided by commercial banks amounted to slightly more than U.S.\$700 million.

### *Costa Rica*

The Costa Rican deal covered the entire U.S.\$1.8 billion stock of that country's outstanding medium- and long-term commercial debts, including some U.S.\$325 million in arrears. It was uniquely structured in that there was no new-money option; the focus was strictly on debt and debt-service reduction. There was also a value-recovery provision to take effect once Costa Rica's GDP exceeds the 1989 level by 20 per cent in real terms. This agreement marked the first time that a country with outstanding interest arrears to banks had successfully negotiated a debt-reduction package with bank creditors.

In this case, the majority of banks opted to exchange existing claims for bonds at a discount of 84 per cent. The balance of banks' claims were exchanged for par bonds at a fixed 6.25 per cent rate of interest. Bonds received by banks that had participated to a significant extent in the debt buy-back (i.e., had tendered 60 per cent or more of their claims) were supported by a rolling interest guarantee of 12-18 months and had a maturity period of 20 years with a grace period of 10 years. Bonds received by the remaining banks, which tendered less than 60 per cent of their claims in the buy-back, did not receive the interest guarantee and the maturity period was 25 years with a grace period of 15 years. Funds used to finance the debt buy-back and to provide the interest guarantee were provided principally by the IMF, the World Bank, Japan and other bilateral donors.

As part of the package, Costa Rica also paid 20 per cent of past due interest associated with debt not bought back in cash, with the remaining 80 per cent paid over 15 years at floating market interest rate.

The agreement with the banks enabled Costa Rica to reduce its medium- and long-term commercial bank claims by roughly U.S.\$1 billion at a cost of about U.S.\$185 million.

de 1,3 milliard de dollars É.-U. des créances bancaires existantes, en grande partie à l'aide des ressources du FMI, de la Banque mondiale et du Japon. D'autres opérations de réduction de l'encours et du service de la dette sont actuellement envisagées. À la fin de février, l'accord visant l'apport d'argent frais a été signé. Le montant total que les banques commerciales se sont alors engagées à injecter dépasse légèrement les 700 millions de dollars É.-U.

### *Costa Rica*

L'accord concernant le Costa Rica porte sur l'ensemble des dettes commerciales à moyen et à long terme de ce pays, lesquelles se chiffraient à 1,8 milliard de dollars É.-U., y compris quelque 325 millions de dollars en arriérés. C'est le seul accord du genre à ne pas prévoir l'injection d'argent frais. Il comporte aussi une clause d'appréciation qui doit prendre effet dès que le PIB dépasse de 20 %, en termes réels, le niveau de 1989. C'est le tout premier montage financier comportant des opérations de réduction de la dette qu'un pays ayant des arriérés d'intérêts a réussi à négocier avec ses créanciers bancaires.

Dans le cas de cet accord, la majorité des banques ont opté pour l'échange de leurs créances contre des obligations vendues avec une décote de 84 %. Les autres ont échangé leurs créances au pair contre des obligations assorties d'un taux d'intérêt fixe de 6,25 %. Les obligations reçues par les banques ayant largement participé à l'opération de rachat de dettes (c'est-à-dire celles qui ont mis en adjudication 60 % ou plus de leurs créances) sont assorties d'une garantie renouvelable de paiement des intérêts d'une durée de 12 à 18 mois et d'une échéance de 20 ans, avec un délai de grâce de 10 ans. Les banques qui avaient mis en adjudication moins de 60 % de leurs créances dans le rachat de dettes ont reçu, pour leur part, des obligations ne comportant aucune garantie de paiement des intérêts et assorties d'une échéance de 25 ans, avec une période de grâce de 15 ans. Les fonds qui ont servi à financer le rachat de dettes et à assurer la garantie reconductible de paiement des intérêts provenaient principalement du FMI, de la Banque mondiale, du Japon et d'autres donateurs bilatéraux.

Comme prévu dans le montage financier négocié, le Costa Rica a aussi réglé 20 % des arriérés d'intérêts exigibles sur la dette non comprise dans l'opération de rachat au comptant; le reste, soit 80 %, devra être remboursé sur une période de 15 ans à un taux variable en fonction du marché.

L'accord mis au point avec les banques a permis au Costa Rica de réduire sa dette bancaire à moyen et à long terme d'environ 1 milliard de dollars É.-U. en déboursant environ 185 millions de dollars É.-U.

## Venezuela

In late March 1990, Venezuela reached an agreement-in-principle with its bank creditors on a medium-term financing package that was the most complex of all deals so far negotiated. Covering medium- and long-term commercial bank debt amounting to about U.S.\$20 billion, the agreement has five options: a debt buy-back at market terms at a discount of 55 per cent;<sup>11</sup> debt swaps for bonds, either at a 30 per cent discount with a market interest rate or at par with a concessional 6.75 per cent interest rate – both types of bonds would be collateralized with respect to principal and fourteen months of interest on a rolling basis; new loans equivalent to 20 per cent of existing medium- and long-term claims on Venezuela to be disbursed over four years; or temporary (five years) interest rate reduction with twelve months of rolling interest support covering the period of the concessional interest rate. As in the Mexican and Costa Rican packages, there is a value-recovery provision. Banks participating in the discount and par bond options will receive fully detachable and negotiable oil warrants providing for increased payments to creditors, beginning six years from the date of issue, should Venezuelan oil export prices exceed a given reference price.

This agreement, which must now be approved by creditor banks at large, is expected to become effective before the end of the year. Preliminary reports indicate that banks accounting for about 38 per cent of eligible medium- and long-term claims have opted for par bonds, with another 13 per cent opting for the temporary interest rate reduction. The discount bonds and the debt buy-backs have drawn relatively little interest, each attracting banks accounting for less than 10 per cent of eligible claims. By contrast, a higher-than-expected number of banks, representing for roughly 30 per cent of eligible claims, have chosen to provide new loans. This development probably reflects the recent increase in the price of oil and the resulting improved economic prospects for Venezuela.

<sup>11</sup> In actual fact, the debt buy-back is being structured in the form of a debt exchange. Instead of receiving cash, banks choosing this option will receive short-term (90 days) notes that are fully collateralized as to principal and interest. While more complex, it is effectively comparable to a straight buy-back.

## Venezuela

À la fin de mars 1990, le Venezuela est parvenu à un accord de principe avec ses créanciers bancaires sur le plus complexe des montages financiers à moyen terme négociés jusque-là. Portant sur la dette bancaire à moyen et à long terme de ce pays, laquelle s'élève à environ 20 milliards de dollars (1), l'accord propose cinq formules : le rachat de dettes aux conditions du marché avec une décote de 55 %<sup>11</sup>; la conversion de dettes soit en obligations vendues avec une décote de 30 % et assorties du taux d'intérêt du marché, soit en obligations au pair assorties d'un taux de faveur de 6,75 % - le principal des deux types d'obligations et le paiement des intérêts étant couverts par une garantie reconductible pouvant aller jusqu'à 14 mois; l'octroi de nouveaux prêts d'un montant équivalant à 20 % de leurs créances à moyen et à long terme sur le Venezuela et répartis sur quatre ans; une réduction temporaire (c'est-à-dire cinq ans) de taux d'intérêt soutenue par une garantie reconductible de paiement des intérêts pour une durée de douze mois, couvrant la période où le taux de faveur est en vigueur. Tout comme les montages financiers mis au point pour le Mexique et le Costa Rica, l'accord concernant le Venezuela prévoit une clause d'appréciation de la dette. Les banques qui auront participé à des opérations d'échange de créances contre des obligations vendues avec décote ou des obligations au pair recevront des titres avec bon de souscription à des actions pétrolières entièrement détachable et négociable qui assureront aux créanciers des paiements accrus à compter de six ans après la date d'émission si les prix d'exportation du pétrole vénézuélien dépassent un prix de référence donné.

On prévoit que l'accord, qui doit maintenant être approuvé par l'ensemble des créanciers bancaires, entrera en vigueur avant la fin de l'année. Des rapports préliminaires indiquent que des banques détenant environ 38 % des créances à moyen et à long terme admissibles opteraient pour des obligations au pair, tandis qu'un groupe d'autres banques en possédant 13 % préférerait la formule de diminution temporaire des taux d'intérêt. La vente d'obligations avec décote et les rachats de dettes ont soulevé relativement peu d'intérêt, attirant dans chaque cas un groupe de banques dont les créances représentent moins de 10 % de l'ensemble de la dette admissible. En revanche, un nombre plus élevé de banques que prévu, regroupant environ 30 % des créances admissibles, ont choisi de consentir de nouveaux prêts. Cette situation n'est sans doute pas étrangère à la hausse récente du cours du pétrole et à l'amélioration des perspectives économiques qui en découle.

En réalité, le rachat de dettes revêt la forme d'un échange de titres de dette. Au lieu de recevoir de l'argent, les banques qui optent pour cette formule recevront des billets à court terme (90 jours) dont le principal et l'intérêt sont entièrement garantis. Bien que plus complexe, cette opération est effectivement comparable à l'opération classique de rachat de dettes.

# Minutes of Bank of Canada Board of Directors' meeting

# Procès-verbaux des réunions du Conseil d'administration de la Banque du Canada

*Extracts from the minutes of the meeting of the Board of Directors held on 19 October 1990*

*Extraits du procès-verbal de la réunion du Conseil d'administration tenue le 19 octobre 1990*

## ECONOMIC AND FINANCIAL CONDITIONS AND MONETARY POLICY

Senior staff members joined the meeting and, on the basis of the notes attached to these minutes, commented on economic and financial developments since the previous meeting.

## L'ÉVOLUTION DE LA SITUATION ÉCONOMIQUE ET FINANCIÈRE ET LA POLITIQUE MONÉTAIRE

Des cadres supérieurs de la Banque se joignent aux membres du Conseil et, en s'inspirant des notes jointes au présent procès-verbal, ils font part de leurs observations sur l'évolution de la situation économique et financière depuis la dernière réunion.

### Governor's remarks

The Governor began by noting several of the key elements that had influenced the activities of the Bank of Canada in financial markets since the last meeting of the Board of Directors.

The most recent economic information provided further confirmation that demand conditions in the Canadian economy were easing. New housing starts had declined further in the third quarter, with activity in the resale housing market also weakening. The rate of unemployment rose slightly in September following a significant increase over the summer. The rate of increase in the monetary aggregates continued at the slower pace established earlier this year, while total business credit expanded somewhat less rapidly in the third quarter than in the first half of the year. Household credit has been rising at lower rates this year after an extended period of strong growth.

The Governor indicated that, although the easing of demand in relation to the capacity of the economy to supply goods and services clearly worked in the direction of reducing underlying inflation pressures, there were other factors present that worked in

### Observations du gouverneur

En guise d'introduction, le gouverneur passe en revue les principaux facteurs qui ont influencé les mesures prises par la Banque du Canada sur les marchés financiers depuis la dernière réunion du Conseil d'administration.

Les plus récentes données sur l'activité économique apportent une nouvelle confirmation du tassement de la demande au sein de l'économie canadienne. Le nombre de mises en chantier a de nouveau diminué au troisième trimestre, et l'activité sur le marché secondaire des maisons a donné des signes d'essoufflement. Après avoir fortement augmenté au cours de l'été, le taux de chômage s'est légèrement accru en septembre. Les agrégats monétaires ont continué de croître au rythme, moins rapide, établi plus tôt durant l'année, et la croissance de l'ensemble des crédits aux entreprises s'est ralentie quelque peu au troisième trimestre par rapport au premier semestre de l'année. Par ailleurs, les crédits aux ménages ont progressé moins rapidement au cours de l'année, après avoir connu une longue période de forte croissance.

S'il est clair, signale le gouverneur, que le tassement de la demande par rapport à la capacité de l'économie de produire des biens et des services est propice à une réduction des pressions inflationnistes sous-jacentes, il reste que des facteurs défavorables sont aussi à l'oeuvre. Des pressions tenaces sur les

the opposite direction. For example, the economy continued to experience persistent domestic cost pressures, partly as a result of the concerns of individuals regarding continuing inflation. Another factor was the oil price shock, which will be increasingly reflected in consumer price statistics in coming months. An additional potential factor arose out of the initial impact on prices of the GST, scheduled to be implemented at the beginning of next year. The Governor emphasized that although blips in prices created by events like the oil shock and the GST were unavoidable, they should not be allowed to feed an inflationary cost-price process. Rather, monetary policy must give people confidence that inflation will decline over time.

The Governor also noted that there was a degree of nervousness in financial markets during the period, reflecting, at least in part, the effect of Middle East developments on world oil markets and the resulting intensification of inflation concerns. Canadian long-term interest rates had increased by about one-half of a percentage point, with most of the increase occurring in the second half of September. The movements in the Canadian dollar had been volatile, with a sharp decline against the U.S. dollar in early September after it reached a 12-year high in August. The exchange value of the dollar had subsequently recovered somewhat and had remained generally firm until it again came under strong downward pressure at the beginning of the week of the Board meeting.

In light of the reduced pressure on inflation from the side of demand, scope had emerged through the year for an easing in monetary conditions, consistent with the longer-term objective of price stability. However, the continued presence of inflationary expectations, some factors working in an inflationary direction, and the uncertainty present in financial markets, gave ample demonstration of the need for continued caution in the implementation of monetary policy. Short-term interest rates fell by a small additional amount in the first part of September, for a cumulative decline of about one and one-half percentage points since the spring. In mid-September there was a general reduction in the prime lending rate of commercial banks of one-half of a percentage point, the same as the decline that had occurred in mid-August. Since mid-September, however, short-term interest rates had remained relatively stable.

coûts intérieurs continuent notamment de se manifester, en partie à cause des craintes de la persistance de l'inflation. Un autre de ces facteurs a été le choc pétrolier, dont l'incidence se reflétera de plus en plus au cours des prochains mois dans les statistiques sur les prix à la consommation. Il se peut aussi que l'effet initial exercé sur les prix par la TPS, dont l'entrée en vigueur est prévue pour le début de l'année prochaine, joue un rôle. Le gouverneur insiste sur le fait que, bien qu'il soit inévitable que des événements comme le choc pétrolier et l'adoption de la TPS produisent des à-coups dans le rythme d'évolution des prix, il ne faut pas laisser ces à-coups alimenter une course inflationniste entre les coûts et les prix. La politique monétaire doit plutôt amener les gens à avoir bon espoir que l'inflation diminuera avec le temps.

Le gouverneur mentionne par ailleurs qu'une certaine nervosité s'est fait sentir sur les marchés financiers au cours de la période qui s'est écoulée depuis la dernière réunion du Conseil, nervosité attribuable du moins partiellement aux répercussions de la crise du Golfe sur les marchés mondiaux du pétrole et à l'intensification des craintes à l'égard de l'inflation qui en a découlé. Les taux d'intérêt canadiens à long terme ont augmenté d'environ un demi-point de pourcentage, le gros de cette hausse ayant été enregistré au cours de la dernière quinzaine de septembre. Le dollar canadien a beaucoup fluctué; après avoir atteint en août son plus haut niveau depuis douze ans, il s'est fortement replié par rapport au dollar É.-U. au début de septembre. Il s'est redressé quelque peu par la suite et est resté généralement ferme jusqu'à ce que d'intenses pressions à la baisse s'exercent de nouveau sur lui au début de la semaine durant laquelle a lieu la présente réunion du Conseil.

Le relâchement des pressions de la demande sur l'inflation a permis au cours de l'année un assouplissement des conditions monétaires compatible avec la poursuite de l'objectif à plus long terme de la politique monétaire, à savoir la stabilité des prix. Toutefois, la persistance des attentes inflationnistes, la présence de certains facteurs de nature inflationniste et l'incertitude qui régnait sur les marchés financiers montraient nettement qu'il fallait continuer de faire preuve de prudence dans la mise en oeuvre de la politique monétaire. Au début de septembre, les taux d'intérêt à court terme ont fléchi encore un peu; au total, ils ont baissé d'environ un point et demi de pourcentage depuis le printemps. À la mi-septembre, comme cela avait été le cas à la mi-août, les banques commerciales ont généralement abaissé d'un demi-point de pourcentage le taux de base de leurs prêts bancaires. Depuis la mi-septembre toutefois, les taux d'intérêt à court terme sont restés relativement stables.

En ce qui concerne les opérations de gestion des réserves-encaisse effectuées par la Banque du Canada, le gouverneur déclare que, durant la majeure partie de septembre, celles-ci ont cherché à contenir les effets des fortes pressions à la

With respect to the Bank of Canada's cash management operations, the Governor said that for much of September they were oriented towards moderating the impact in markets of strong speculative pressures pushing down short-term interest rates. As a result, cash reserve settings were generally restrictive, supported by sales of treasury bills in mid-September. Market expectations of additional declines in short-term interest rates diminished in the latter part of September and, indeed, unexpected upward pressure on rates developed. The stance of monetary policy operations shifted more towards maintaining stability in financial markets. The call loan rate, in a range of 13 to 13 1/2 per cent for most of September, fell to about 12 1/2 per cent by the end of September and remained there for much of October prior to the Board meeting. There were ten extensions of Special Purchase and Resale Agreements in late September and the first part of October aimed at reducing upward pressure on interest rates in the overnight money market. The high level of the call loan rate relative to the Bank Rate meant that money market dealers drew heavily on their ordinary Purchase and Resale Agreement lines with the Bank of Canada during the period.

The Governor indicated that the Bank had made a total of 62 advances to members of the Canadian Payments Association over the 29 business days since the last Board meeting, including 18 to major banks.

The directors then reported on economic developments in their respective regions.

## STAFF TALKING NOTES ECONOMIC AND FINANCIAL DEVELOPMENTS

### RECENT ECONOMIC DEVELOPMENTS

#### Summary

- Crude oil prices have risen substantially over the past six weeks, but most other commodity prices have fallen.
- Economic activity remains vigorous in the major overseas economies, and their consumer price inflation continues to edge higher with the main effects of the higher oil prices still to come.

baisse, de nature spéculative, qui se sont exercées sur les taux d'intérêt à court terme pratiqués sur les marchés. Ces opérations ont donc eu un caractère généralement restrictif et ont été renforcées, à la mi-septembre, par des ventes de bons du Trésor. Les attentes du marché concernant de nouvelles baisses des taux d'intérêt à court terme se sont atténuées vers la fin de septembre, et des pressions à la hausse imprévues ont même commencé à se faire sentir sur les taux. Par la suite, la politique monétaire a davantage visé à maintenir la stabilité des marchés financiers. Après avoir fluctué entre 13 et 13 1/2 % pendant presque tout le mois de septembre, le taux des prêts à vue a fléchi pour s'inscrire à environ 12 1/2 % à la fin de septembre, niveau où il s'est maintenu durant la majeure partie de la période comprise entre le 1<sup>er</sup> octobre et la réunion du Conseil. Vers la fin de septembre et le début d'octobre, la Banque a conclu dix prises en pension spéciales afin d'atténuer les pressions à la hausse qui s'exerçaient sur les taux d'intérêt du marché à un jour. Le niveau élevé du taux des prêts à vue par rapport au taux officiel d'escompte a contraint les agents agréés du marché monétaire à puiser largement, durant la période, dans les facilités de crédit que la Banque du Canada leur octroie sous forme de prises en pension ordinaires.

Le gouverneur signale qu'au cours des 29 jours ouvrables qui se sont écoulés depuis la dernière réunion du Conseil, la Banque du Canada a consenti en tout 62 avances aux membres de l'Association canadienne des paiements, dont 18 à de grandes banques.

Les administrateurs commentent ensuite la situation économique de leurs régions respectives.

## EXPOSÉS ORAUX DES MEMBRES DU PERSONNEL L'ÉVOLUTION DE LA SITUATION ÉCONOMIQUE ET FINANCIÈRE

### L'ÉVOLUTION RÉCENTE DE LA SITUATION ÉCONOMIQUE

#### Aperçu

- Les cours du pétrole brut ont considérablement augmenté au cours des six dernières semaines, mais ceux de la plupart des autres produits de base ont chuté.
- L'activité économique reste vigoureuse dans la plupart des grands pays d'outre-mer; la hausse des prix à la consommation se poursuit, mais les principaux effets du renchérissement du pétrole sont encore à venir.

- Economic indicators suggest that the U.S. economy has expanded at a modest pace in the third quarter, while inflation has escalated sharply.
- In Canada, the balance of evidence suggests that output has declined again in the third quarter, putting the economy in recession according to the common definition. The 12-month increase in the consumer price index was unchanged through August and September, but underlying cost pressures remain strong and higher crude oil prices have not yet affected consumer prices to any significant extent.

### Developments in commodity markets

Tensions in the Middle East have continued to push world oil prices higher. At the time of the last meeting of the Board, the price of West Texas Intermediate was about U.S.\$30 per barrel. With considerable volatility, depending on the latest news, the price has subsequently trended up, reaching an all-time high of U.S.\$40.40 per barrel on 9 October. In the past week, the price has dropped somewhat and closed at U.S.\$36.80 on 18 October.

In other commodity markets, the main features over the past six weeks have been declines in metals prices as demand has eased and inventories have begun to build up, and important declines in lumber prices, reflecting the slowing of residential construction in North America. Among foodstuffs, both livestock and grains prices (except for wheat) have risen, but the overall Bank of Canada commodity price index, excluding energy, is down about 3.5 per cent over the past six weeks.

### Economic developments in the major overseas economies

Economic activity continued to expand vigorously through the second quarter in the five major overseas economies, raising the four-quarter increase in the volume of output from 4.2 per cent in the first quarter to 4.6 per cent in the second quarter. The higher growth was due mainly to a very sharp increase in output in Japan. Recent information on industrial production suggests that economic growth has remained strong in the third quarter in the major overseas economies and, in spite of the dampening effect of higher oil prices, this is likely to continue through the rest of the year.

- Les indicateurs économiques donnent à penser que l'économie américaine a connu une croissance modeste au troisième trimestre, tandis que le taux d'inflation augmentait fortement.
- Au Canada, l'ensemble des données disponibles indique que la production a de nouveau diminué au troisième trimestre, ce qui signifie que l'économie est entrée en récession, selon la définition la plus courante. La progression de l'indice des prix à la consommation sur 12 mois est restée inchangée en août et septembre, mais les pressions fondamentales exercées par les coûts restent fortes, et la hausse des cours du pétrole brut ne s'est pas encore répercutée de manière notable sur les prix à la consommation.

### L'évolution récente des marchés des produits de base

Les tensions au Moyen-Orient ont continué de pousser à la hausse les cours mondiaux du pétrole. Au moment de la dernière réunion du Conseil, le prix du *West Texas Intermediate* était d'environ 30 \$ É.-U. le baril. Affichant une volatilité considérable liée aux soubresauts de l'actualité, il s'est ensuite orienté à la hausse pour atteindre le 9 octobre un niveau record de 40,40 \$ le baril. La semaine dernière, le prix a quelque peu diminué; il s'établissait à 36,80 \$ à la fermeture des marchés le 18 octobre.

Sur les autres marchés des produits de base, les faits saillants des six dernières semaines ont été les suivants : premièrement, la baisse des cours des métaux, imputable à un affaiblissement de la demande et au fait que les stocks disponibles commençaient à s'accroître; deuxièmement, les baisses importantes accusées par les prix du bois d'oeuvre, qui traduisaient le ralentissement de la construction résidentielle en Amérique du Nord. Au chapitre des produits alimentaires, les prix du bétail et des grains (à l'exception du blé) ont augmenté, mais l'indice global des prix des produits de base de la Banque du Canada, énergie exclue, a diminué d'environ 3,5 % au cours des six dernières semaines.

### L'évolution économique récente dans les grands pays d'outre-mer

L'activité économique a conservé sa vigueur au deuxième trimestre dans les cinq grands pays d'outre-mer; l'augmentation sur quatre trimestres de la production en volume est ainsi passée du premier au deuxième trimestre de 4,2 % à 4,6 %. Cette accélération de la croissance s'explique principalement par le bond remarquable enregistré par la production au Japon. Les données récentes de la production industrielle indiquent que la croissance économique est restée forte au troisième trimestre dans les grands pays d'outre-mer et qu'elle le demeurera probablement jusqu'à la fin de l'année malgré l'effet modérateur du renchérissement du pétrole.

Les pressions inflationnistes continuent à s'intensifier dans les pays d'outre-

Inflationary pressures continue to intensify in the overseas economies. In August, the 12-month increase in the consumer price index for the five countries, taken together, jumped to 4.4 per cent from 3.8 per cent in July, even though the major impact of higher oil prices is yet to be felt at the consumer level.

The continuing strength of economic activity in Japan and Germany has contributed, through higher imports, to further gradual reduction in the external surpluses of these countries. The impact of higher oil prices should soon begin to accelerate this process, and should also work to reduce the external deficit of the United Kingdom. As for the United States, the overall current account balance was essentially unchanged in the second quarter, as a reduction in the merchandise trade deficit was offset by lower net investment income on foreign assets.

## Recent economic developments in the United States

### *Overview*

The U.S. economy continued to slow through the second quarter. Economic indicators suggest that output has grown modestly in the third quarter, with a considerable expansion of output in the industrial sector. Inflation has escalated sharply, in part because of the first effects of higher oil prices, but measures excluding food and energy are also up.

### *Output and employment*

The steady slowing of the U.S. economy continued through the second quarter, with revised figures indicating an increase in gross national product of 0.4 per cent at an annual rate in the second quarter, down from the 1.7 per cent recorded in the first quarter. However, recently released data show a fairly strong rebound in the industrial sector, as industrial output increased at an annual rate of 4 per cent in the third quarter.

The unemployment rate has continued to rise, reaching 5.6 per cent in the third quarter and 5.7 per cent in September. Based on the establishment survey, non-farm employment has declined for three consecutive months. While some of this reflects the winding up of temporary census employment, it is nonetheless clear that employment creation has slowed. In September, goods-sector

mer. Le taux d'augmentation sur 12 mois de l'indice des prix à la consommation pour l'ensemble des cinq pays est passé de 3,8 % en juillet à 4,4 % en août, et ce avant que les consommateurs ne ressentent les principaux effets du renchérissement du pétrole.

La vigueur continue de l'activité économique au Japon et en Allemagne a contribué, par l'entremise d'un renchérissement des importations, à accentuer la réduction graduelle des excédents des échanges extérieurs de ces pays. L'incidence de la hausse des cours du pétrole devrait commencer sous peu à accélérer ce processus et contribuer à réduire le déficit extérieur du Royaume-Uni. Quant aux États-Unis, le solde global de leur balance courante n'a guère changé au deuxième trimestre, une réduction du déficit de la balance commerciale ayant été neutralisée par une baisse des revenus nets de placement en provenance de l'étranger.

## L'évolution économique récente aux États-Unis

### *Vue d'ensemble*

L'économie américaine a continué de ralentir au deuxième trimestre. Les indicateurs économiques donnent à penser que la production a augmenté légèrement au troisième trimestre, à la faveur d'une expansion considérable de la production du secteur industriel. L'inflation s'est considérablement aggravée, à cause en partie des premiers effets du renchérissement du pétrole, mais les indices qui font abstraction de l'alimentation et de l'énergie font également état d'une hausse des prix.

### *La production et l'emploi*

Le ralentissement régulier de l'économie américaine s'est poursuivi au deuxième trimestre; les données révisées ont en effet révélé qu'après avoir progressé au rythme annuel de 1,7 %, au premier trimestre, le produit national brut a affiché un taux de croissance annuel de 0,4 % au deuxième trimestre. Toutefois, les données publiées récemment font état d'un redressement assez marqué du secteur industriel, la production y ayant augmenté au troisième trimestre à un taux annuel de 4 %.

Le taux de chômage a continué de grimper, atteignant 5,6 % au troisième trimestre et 5,7 % en septembre. Selon l'enquête auprès des entreprises, l'emploi dans le secteur non agricole a diminué durant trois mois de suite. Cela s'explique en partie par la fin des emplois temporaires créés dans le cadre du recensement, mais il est évident que la création d'emplois s'est ralentie. En septembre, l'emploi dans les industries productrices de biens a diminué de

employment was down 1.5 per cent from its level a year earlier. Private-sector service employment continues to expand, but it too is slowing.

### *Demand*

On the basis of two months of information, it seems that there has been some growth in the volume of consumer demand in the third quarter. This is confirmed by retail sales in current dollars, which rose at an annual rate of 5.5 per cent in the third quarter, following a decline in the second quarter. Although some of the increase in retail sales reflects the first effects of higher energy prices, an increase in the volume of expenditures for the quarter as a whole is indicated.

Motor vehicle sales increased in the third quarter, and sales of domestically produced vehicles were up strongly. Sales of automobiles were particularly strong in September, in advance of announced ends to some rebates and the introduction of some new models with higher prices in October. Sales for the first ten days of October were down sharply.

Housing starts fell to 1.135 million at an annual rate in September, the eighth consecutive monthly decline. This is the first 8-month consecutive decline on record and starts have reached their lowest level since August 1982. As a result, although non-residential construction picked up slightly through July and August, overall construction activity appears to have fallen sharply in the third quarter.

Data on domestic shipments and on net imports of machinery and equipment through August suggest continued growth in the volume of business investment in the third quarter. The merchandise trade deficit rose in July and August to average \$9.2 billion in current dollars, up from the exceptionally low \$5.3 billion recorded in June. Imports have risen sharply, in part reflecting the higher cost of oil imports, but also reflecting stronger demand for machinery and equipment.

par rapport à l'année précédente. Dans le secteur privé, l'emploi dans les services continue de s'accroître, mais à un rythme lui aussi plus lent.

### *La demande*

À en juger par les données de deux mois, il semble que la demande a quelque peu augmenté en dollars constants au troisième trimestre. Cette observation est confortée par les ventes au détail en dollars courants, qui, après avoir diminué au deuxième trimestre, ont progressé de 5,5 % en taux annuel au troisième. Bien que cette progression des ventes au détail reflète en partie les premiers effets du renchérissement de l'énergie, on constate une augmentation des dépenses en dollars constants sur tout le trimestre.

Les ventes de véhicules automobiles se sont accrues au troisième trimestre, tandis que celles de modèles produits au pays s'accroissaient fortement. Les ventes d'automobiles ont été particulièrement fortes en septembre, les acheteurs voulant profiter de certains rabais dont la fin avait été annoncée. L'arrivée sur le marché, en octobre, de certains nouveaux modèles plus coûteux a également été un facteur. Les ventes pour les dix premiers jours d'octobre ont enregistré une chute marquée.

Les mises en chantier de logements sont tombées, en chiffres annuels, à 1 135 millions en septembre, huitième mois consécutif de baisse. C'est la première fois que les mises en chantier diminuent huit mois de suite, et leur nombre se situe maintenant à son plus bas niveau depuis août 1982. Ainsi, l'activité dans le secteur de la construction semble avoir considérablement diminué au troisième trimestre, même si la construction d'immeubles commerciaux et industriels s'est légèrement redressée en juillet et en août.

Les données relatives aux expéditions au Canada et aux importations nettes de machines et d'équipement effectuées durant le mois d'août indiquent une croissance continue des dépenses d'investissement en dollars constants des entreprises au troisième trimestre. Le déficit en dollars courants de la balance commerciale, qui se situait en juin au niveau exceptionnellement bas de 5,3 milliards de dollars, a atteint une moyenne de 9,2 milliards de dollars pour les mois de juillet et d'août. Les importations ont accusé une forte poussée en raison du renchérissement du pétrole mais aussi d'une hausse de la demande de machines et d'équipement.

### *Prices and costs*

In September, the 12-month increase in the consumer price index reached 6.2 per cent, up from 4.8 per cent in July. In part, this escalation of inflation reflects the effects of higher crude oil prices, which began to influence U.S. consumer prices significantly in August. However, the index excluding food and energy also shows an increase in inflation to 5.5 per cent in September from 5 per cent in July.

There is no new information on production costs since the last meeting, but in the second quarter the employment cost index for the non-farm, private sector recorded an increase of 5.2 per cent relative to the second quarter of 1989.

## **Recent economic developments in Canada**

### *Overview*

Recent information suggests that gross domestic product has declined further in the third quarter, despite a modest increase recorded as of July. While most measures of inflation showed some improvement through the summer, underlying cost pressures continue to escalate. Average negotiated wage increases in July and August were well above the average for the first half of the year, and higher oil prices will soon have an effect on both production costs and consumer prices.

### *Demand*

Indicators of consumer expenditures suggest that there has been a modest increase in the volume of spending in the third quarter, following the sharp decline in the second quarter. Although unit sales of new motor vehicles have fallen further, other indicators suggest some growth. Retail sales excluding new and used cars rose by 1 per cent in July, in current dollar terms, owing to increased demand for non-durable and semi-durable goods. A resumption of growth of personal disposable income, following the large drop generated by the unusually large tax collections in the second quarter, is likely to support some increase in consumer spending.

Housing starts declined to 164,000 at an annual rate in the third quarter, from over 200,000 in the second quarter. At 144,000 units in September, starts are at their lowest level since

### *Les prix et les coûts*

Le taux d'augmentation sur 12 mois de l'indice des prix à la consommation, qui était de 4,8 % en juillet, a atteint 6,2 % en septembre. Cette accélération de l'inflation est imputable aux effets de la hausse du cours du brut, qui en août a commencé à se répercuter de façon notable sur les prix à la consommation aux États-Unis. Cependant, le taux d'augmentation sur 12 mois de l'indice qui fait abstraction de l'alimentation et de l'énergie est passé de 5 % en juillet à 5,5 % en septembre, indiquant aussi une accélération de l'inflation.

Il n'existe pas de nouvelles données sur les coûts de production depuis la dernière réunion du Conseil, mais, au deuxième trimestre, l'indice des coûts de l'emploi dans le secteur privé non agricole a progressé de 5,2 % par rapport au deuxième trimestre de 1989.

## **L'évolution économique récente au Canada**

### *Vue d'ensemble*

Les données récentes indiquent que le produit intérieur brut a continué de diminuer au troisième trimestre en dépit d'une modeste augmentation enregistrée en juillet. Même si la plupart des mesures du taux d'inflation ont fait état d'une certaine amélioration pendant l'été, les pressions sous-jacentes des coûts continuent de s'intensifier. Les augmentations moyennes des salaires négociés étaient en juillet et en août bien supérieures au niveau moyen du premier semestre de l'année, et le renchérissement du pétrole ne va pas tarder à influencer à la fois les coûts de production et les prix à la consommation.

### *La demande*

Les indicateurs des dépenses de consommation laissent croire qu'il y a eu une légère augmentation des dépenses en dollars constants au troisième trimestre, après la baisse sensible enregistrée au second. Certes, les ventes unitaires de véhicules automobiles neufs ont de nouveau chuté, mais les autres indicateurs font état d'une certaine croissance. Abstraction faite des voitures neuves et d'occasion, les ventes au détail ont augmenté de 1 % en juillet en dollars courants à la faveur de l'accroissement de la demande de biens durables et semi-durables. Une reprise de la croissance du revenu disponible des ménages devrait, après le recul considérable engendré par les recouvrements d'impôts exceptionnellement élevés du deuxième trimestre, favoriser une certaine augmentation des dépenses de consommation.

Les mises en chantier de logements sont tombées, en chiffres annuels, à 164 000 au troisième trimestre, contre 200 000 au deuxième. Elles se situaient à 144 000 en septembre, ce qui représente leur plus bas niveau depuis le

the first quarter of 1985. Activity in resale housing markets has also continued to decline.

Shipments of machinery and equipment declined slightly in July and net imports of these goods were also down in July and August, suggesting that there is risk of continued weak investment spending, well below the level indicated by the mid-year Survey of Private and Public Investment Intentions. Overall shipments were up in July, in large part owing to activity in the automobile and steel industries in anticipation of strikes.

The merchandise trade surplus averaged \$13.2 billion at an annual rate in July and August, maintaining the high level recorded in the second quarter. Some of the recent strength in exports reflects the extraordinary activity in anticipation of strikes, and is likely to be reversed in subsequent months.

### *Output and employment*

The latest measure of overall output comes from the report on gross domestic product at factor cost for July. It shows a second consecutive monthly increase of 0.1 per cent, with the July level showing a 0.4 per cent increase from the second quarter at an annual rate. The increase in July was from service-producing industries and was fairly widespread. Goods-sector output was down 0.1 per cent, owing to a sharp decline of 2.7 per cent in construction. Manufacturing output grew fairly strongly, but this reflects the high pre-strike activity in the steel and automobile industries, and is unlikely to be sustained.

Employment fell in the third quarter at an annual rate of 0.7 per cent, following modest growth in the second quarter. Although for the month of September employment was up 0.2 per cent, the labour force grew even more and the unemployment rate rose to 8.4 per cent. All regions experienced higher unemployment in the quarter, led by Ontario where the rate increased by 1 percentage point to 6.5 per cent.

premier trimestre de 1985. Sur le marché secondaire du logement, l'activité a également continué de baisser.

Les expéditions de machines et d'équipement ont diminué légèrement en juillet et les importations nettes de ces biens ont également diminué en juillet et août, de sorte que les dépenses d'investissement risquent de rester faibles et bien en deçà du niveau prévu dans l'enquête menée au milieu de l'année sur les intentions d'investissement dans les secteurs public et privé. L'ensemble des expéditions a augmenté en juillet, à cause en grande partie de l'activité qu'ont connue les industries de l'automobile et de l'acier à un moment où l'on prévoyait des grèves.

L'excédent de la balance commerciale s'est établi en moyenne pour les mois de juillet et d'août à 13,2 milliards de dollars en chiffres annuels, se maintenant ainsi au niveau élevé enregistré au deuxième trimestre. La montée récente des exportations s'explique en partie par l'activité extraordinaire affichée par certains secteurs en perspective d'arrêts de travail, et il est fort possible que cette évolution se renverse dans les mois à venir.

### *La production et l'emploi*

Les dernières données relatives à la production globale ont été publiées dans le rapport sur le produit intérieur brut au coût des facteurs pour juillet. Ce document montre qu'il s'est produit pour un deuxième mois consécutif une augmentation de 0,1 %, le niveau de juillet accusant une augmentation de 0,4 % en taux annuel par rapport au deuxième trimestre. L'augmentation de juillet était imputable au secteur des services et a été assez généralisée. Dans les industries productrices de biens, la production a diminué de 0,1 % par suite d'une chute de 2,7 % de la construction. Certes, la production du secteur manufacturier s'est accrue à un rythme assez rapide, mais cet accroissement reflète l'activité fébrile enregistrée dans les industries de l'acier et de l'automobile devant la menace de grèves et il a donc peu de chances de se maintenir.

L'emploi est tombé au troisième trimestre à un taux annuel de 0,7 %, après avoir accusé une croissance modeste au deuxième trimestre. Les chiffres de l'emploi accusent certes une hausse de 0,2 % pour le mois de septembre, mais la population active a progressé à un rythme encore plus rapide, de sorte que le taux de chômage a augmenté pour s'établir à 8,4 %. Toutes les régions du pays ont connu une aggravation du chômage durant le trimestre. L'Ontario vient en tête avec une augmentation d'un point de pourcentage et un taux de 6,5 %.

### *Prices and costs*

The 12-month increase in the consumer price index was unchanged through August and September from the 4.2 per cent recorded in July. In contrast with the situation in the United States, higher crude oil prices have not been passed on to Canadian consumers, to any significant extent, at least through mid-September. Based on limited information on gasoline prices, the first major impact of the oil price increase on consumer prices will be recorded in the October survey. Excluding food and energy, the consumer price index in September stood 4.1 per cent above its level a year earlier, up slightly from the increase recorded in July and August.

Beginning this month, Labour Canada is reporting major wage settlements on a monthly basis. Following the drop in the second quarter, to average annual increases of 5.5 per cent, major settlements jumped sharply to 6.5 per cent in July and 6.7 per cent in August. The increases were higher in the public sector than in the private sector in both months. In August, the average increases were 7.0 per cent in the public sector and 6.4 per cent in the private sector. Average increases in August were highest in Atlantic Canada (7.8 per cent); Ontario settlements averaged 6.9 per cent.

Average hourly earnings, on a fixed-weight basis, using the data from the Survey of Employment, Payrolls and Hours, were up 6.1 per cent in the 12 months ending in July, compared to 5.7 per cent in June.

## RECENT FINANCIAL DEVELOPMENTS

### **Summary of developments since the previous meeting**

- Interest rate levels in most foreign markets are about the same as they were six weeks ago, even though the background has included the unsettling effects of the Gulf crisis, swings in oil prices and the budget impasse in the United States.
- The U.S. dollar has remained weak in foreign currency markets, largely based on views that slowing economic activity will support an easing of interest rates in the United States while in overseas economies demand and interest rate pressures are likely to remain strong.

### *Les prix et les coûts*

Le taux d'augmentation sur 12 mois de l'indice des prix à la consommation, qui était de 4,2 % en juillet, est resté le même en août et septembre. Au Canada, contrairement à ce qui s'est passé aux États-Unis, le renchérissement du brut n'avait pas encore commencé, du moins à la mi-septembre, à se répercuter de manière significative sur les prix à la consommation. Selon les quelques données dont nous disposons concernant les prix de l'essence, les premières répercussions majeures de la hausse des cours du pétrole sur les prix à la consommation devraient se manifester dans l'enquête d'octobre. L'indice des prix à la consommation excluant l'alimentation et l'énergie a augmenté de 4,1 % en septembre 1990 par rapport au niveau enregistré un an auparavant, soit un taux d'augmentation légèrement supérieur à celui enregistré en juillet et en août.

À partir du mois de novembre, Travail Canada publiera chaque mois des données sur les principaux accords salariaux. Après être tombés à 5,5 % au deuxième trimestre, les taux moyens d'augmentation des salaires stipulés dans les grands accords salariaux ont enregistré une très forte augmentation et se sont établis à 6,5 % en juillet et à 6,7 % en août. Les augmentations obtenues dans le secteur public ont été plus élevées que celles du secteur privé durant les deux mois. En août, les augmentations moyennes ont été de 7 % dans le secteur public et de 6,4 % dans le secteur privé. C'est dans les provinces de l'Atlantique que les taux moyens d'augmentation ont été les plus élevés, avec 7,8 %. En Ontario, le taux moyen d'augmentation des salaires négociés a été de 6,9 %.

Selon l'Enquête sur l'emploi, la rémunération et les heures de travail, la moyenne des gains horaires calculée à l'aide de pondérations fixes a augmenté de 6,1 % sur la période de 12 mois s'étant terminée en juillet, contre 5,7 % en juin.

## L'ÉVOLUTION RÉCENTE DE LA SITUATION FINANCIÈRE

### **Sommaire**

- Les taux d'intérêt sur la plupart des marchés étrangers sont à peu près aux niveaux auxquels ils se situaient il y a six semaines, en dépit des effets perturbateurs de la crise du Golfe, des fluctuations marquées des prix du pétrole et du cul-de-sac budgétaire aux États-Unis.
- Le dollar É.-U. est resté faible sur les marchés des changes étrangers, ce qui tient dans une large mesure au sentiment que le ralentissement de l'économie favorisera un relâchement des taux d'intérêt de ce pays pendant que les pressions de la demande et celles que subissent les taux d'intérêt restent fortes dans les pays d'outre-mer.

- Canadian short-term rates have been stable since mid-September, after a steady decline of about 1 1/2 percentage points over the summer. Prime loan rates were reduced from 14 1/4 per cent to 13 3/4 per cent on 20 September. Long-term Canadian rates rose quite sharply during the second half of September and are up over 1/2 of a percentage point from earlier levels.
- The Canadian dollar has been firm over most of the period, reflecting the stability of short-term domestic rates after their earlier declines as well as oil price developments. Recent weakness has returned the dollar to just under 86 cents (U.S.) as of noon on 17 October, about the level of six weeks ago.
- Growth in monetary and credit aggregates continues to be moderate.

### Interest rate developments in foreign markets

Despite the unsettled Middle East situation and the upward spiral in world oil prices, current interest rate levels in most countries are not markedly different from those of early September.

In the United States, interest rates have been influenced by varied and often offsetting factors. On the one hand, a major concern of the market has continued to be the inflationary implications of sharply higher oil prices. Another concern has been the impasse in Washington in reaching an accord on a budget deficit reduction plan which has underlined the difficulties in imposing more fiscal restraint at the federal government level. On the other hand, there have been signs of further slowing in the U.S. economy and widespread anticipation of another easing in Federal Reserve policy which, based on the comments of Chairman Greenspan, is seen as being linked to congressional approval of a "credible" U.S. budget plan. Federal Reserve policy has been steady since July, when the federal funds rate declined by 1/4 of a percentage point. Still another influence on markets has been an increasing focus on U.S. banks with problem loan portfolios, a factor that has widened interest rate spreads between different quality borrowers.

Against this background, most short-term U.S. interest rates have edged higher over the recent period, although Treasury bill rates have declined slightly owing to the market's preference for

- Les taux d'intérêt à court terme canadiens sont demeurés stables depuis la mi-septembre, après avoir baissé d'environ 1,5 point durant l'été. Les taux des prêts préférentiels sont passés de 14 1/4 % à 13 3/4 % le 20 septembre. Les taux d'intérêt à long terme ont augmenté assez rapidement durant la seconde quinzaine de septembre, gagnant plus d'un demi-point de pourcentage.
- Durant la plus grande partie de la période, le dollar canadien a fait preuve d'une vigueur qui reflète à la fois la stabilité des taux intérieurs à court terme, suite aux baisses antérieures, et l'évolution des prix du pétrole. Le dollar canadien est retombé tout récemment, en l'occurrence le 17 octobre à midi, à un peu moins de 86 cents É.-U., soit à peu près au niveau qu'il avait atteint six semaines auparavant.
- La croissance des agrégats de la monnaie et du crédit continue d'être modérée.

### L'évolution des taux d'intérêt sur les marchés étrangers

En dépit du climat d'incertitude qui règne au Moyen-Orient et de la montée en spirale des cours mondiaux du pétrole, les niveaux actuels des taux d'intérêt dans la plupart des pays ne sont pas très différents de ceux du début de septembre.

Aux États-Unis, le loyer de l'argent a été influencé par des facteurs divers qui souvent se neutralisaient. D'une part, les incidences inflationnistes du renchérissement du pétrole sont demeurées un grand motif de préoccupation. L'incapacité où se trouve Washington de parvenir à un accord sur le plan de réduction du déficit budgétaire en est un autre; ce dernier problème illustre bien les difficultés qu'éprouve le gouvernement fédéral à s'imposer une plus grande rigueur dans le domaine du budget. D'autre part, on a aussi observé d'autres signes du ralentissement de l'économie américaine et de l'attente généralisée d'un nouveau relâchement de la politique monétaire de la Réserve fédérale, lequel, à en juger par les commentaires du Président, M. Greenspan, est considéré comme étant lié à l'approbation d'un plan « crédible » de réduction du déficit budgétaire américain. La politique de la Réserve fédérale ne s'est pas modifiée depuis la baisse de 1/4 % qu'a subie le taux des fonds fédéraux en juillet. Le fait que des banques américaines ont un important portefeuille de prêts problématiques, ce qui a creusé les écarts des taux d'intérêt fondés sur la solvabilité perçue des emprunteurs, a constitué une autre source de perturbation.

Dans ce contexte, la plupart des taux d'intérêt à court terme américains se sont inscrits en hausse au cours de la période récente, à l'exception des taux des bons du Trésor, qui ont légèrement baissé en raison de la préférence du marché

high quality paper. Long-term U.S. Treasury yields have shifted back and forth in a range of 8 3/4 per cent to 9 1/4 per cent, after increasing from around the 8 1/2 per cent level during August in the aftermath of the invasion of Kuwait.

As for the overseas countries, interest rates in Japan have continued to be underpinned by the buoyancy of the Japanese economy. Rates in Germany have also remained firm, reflecting in part continued concerns over the growing cost of reunification. The exception has been the United Kingdom, where a percentage point reduction in the key base lending rate was announced earlier in October. This move was tied to the entry of sterling into the Exchange Rate Mechanism (ERM) of the European Monetary System and the accompanying strength of the pound.

### Developments in foreign currency markets

The main feature of the currency markets has been the ongoing weakness of the U.S. dollar, extending a trend that has prevailed since last spring. A principal influence has continued to be the relative interest rate structures that have evolved this year in overseas countries vis-à-vis the United States, combined with forward-looking views that, while slower economic activity may prompt lower U.S. rates, interest rates in other major countries are likely to remain firm.

This interest rate background has been particularly relevant in the case of the Japanese yen, which has gained about 10 per cent against the dollar since early September and over 20 per cent since last April. Short-term rates in Japan have been in the same range as equivalent U.S. interest rates since August, in sharp contrast to differentials in favour of U.S. rates of 2 percentage points a year ago. Long-term Japanese rates climbed to within 1/4 of a percentage point of U.S. rates in late September before easing back more recently. In addition to the impact of these interest rate developments on capital flows, the yen has reportedly been supported in recent weeks by purchases against the dollar by Japanese institutions hedging their currency exposure on U.S. dollar-denominated assets.

Although to a lesser extent than the yen, the major European currencies have also appreciated vis-à-vis the U.S. dollar in the recent period. Since early September, the British pound and

pour des effets de haute qualité. Les taux de rendement des obligations à long terme du Trésor des États-Unis ont fluctué dans une fourchette de 8 3/4 % à 9 1/4 %, ces taux, qui étaient d'environ 8 1/2 % en août, ont commencé à augmenter après l'invasion du Koweït.

Passons à la situation dans les pays d'outre-mer. Au Japon, les taux d'intérêt ont continué d'être soutenus par la grande vigueur économique du pays. En Allemagne, les taux se sont maintenus à un niveau relativement élevé, reflétant en partie les préoccupations que continue de susciter le coût de plus en plus élevé de la réunification. Par contre, au Royaume-Uni, une réduction d'un point du taux clé des prêts a été annoncée dans le courant du mois d'octobre. Cette baisse était liée à l'entrée de la livre dans le mécanisme des taux de change du Système monétaire européen et au raffermissement de cette devise qui s'est ensuivi.

### L'évolution des marchés des changes

Le trait dominant de l'évolution des marchés de devises a été la faiblesse continue du dollar É.-U., qui se manifeste depuis le printemps dernier. Parmi les principaux facteurs qui influencent ces marchés, il faut compter celui des structures de taux d'intérêt qui ont évolué cette année dans les pays d'outre-mer par rapport aux taux américains, sans oublier le sentiment que les taux d'intérêt européens et japonais sont susceptibles de se maintenir à leurs niveaux actuels, bien que le ralentissement de l'activité économique puisse déclencher un mouvement à la baisse des taux américains.

L'évolution du yen japonais, qui a gagné environ 10 % par rapport au dollar depuis le début de septembre et plus de 20 % depuis avril dernier, reflète particulièrement bien la situation générale des taux d'intérêt. Depuis août, les taux à court terme se sont maintenus au Japon dans une fourchette semblable à celle de leurs pendants américains, ce qui contraste nettement avec les écarts positifs de 2 points de pourcentage qui existaient il y a un an entre les taux américains et les taux japonais. Durant les derniers jours de septembre, les taux à long terme japonais ont grimpé pour réduire à 1/4 de point l'écart par rapport aux taux américains, mais ils ont de nouveau baissé par la suite. Outre l'incidence que cette évolution des taux d'intérêt a eue sur les flux de capitaux, on signale que le yen a été soutenu au cours des dernières semaines par des achats de yens contre dollars É.-U., achats effectués par des institutions japonaises désireuses de se couvrir contre les risques liés à la possession d'actifs libellés en cette devise.

Les grandes devises européennes se sont également appréciées vis-à-vis du dollar américain au cours de la période récente, quoique dans des proportions

German mark have both increased by about 4 per cent against the dollar. The entry of sterling into the ERM strengthened the U.K. currency on the anticipation that its future value will be underpinned by the formal linkage with the German mark. Higher oil prices have supported the pound as well, given Britain's position as an oil exporter. In the case of the mark, the currency market seemed comforted by assurances from the Bundesbank that no concession on price stability would arise from either increased oil prices or efforts to revitalize the East German economy.

### Canadian financial developments

After a steady decline amounting to about 1 1/2 percentage points during the summer, short-term interest rates in Canada have been stable since mid-September at about the same levels as early this year. In response to the decline that had occurred in market rates, prime loan rates were reduced on 20 September to 13 3/4 per cent, the second reduction of 1/2 of a percentage point within a month. Mortgage rates declined to a typical level of 13 1/4 per cent for terms of one to five years, down 1/4 to 1/2 of a percentage point from the levels in early September.

As measured by 3-month commercial paper rates, the short-term Canada/U.S. interest rate differential has narrowed over the past six weeks from about 4 1/2 percentage points to 4 1/4 points. This reflected a decline of around 1/8 of a percentage point in Canadian rates early in the period, combined with a rise of a similar amount in U.S. rates.

The recent stability of domestic short-term rates has contributed to a generally firm Canadian dollar which, after reaching a 12-year high of 88.59 cents (U.S.) on 23 August, had fallen to under 86 cents (U.S.) in early September. The decline at that time reflected in part market expectations of still further easing in interest rates in Canada. As these expectations faded, and higher oil prices led to some improvement in the terms of trade for Canada as a net energy exporter, the dollar moved back above the 87 cents (U.S.) level in early October. After falling back in recent days, apparently due in part to Canadian dollar portfolio transactions by foreign investors, the dollar is currently (noon, 17 October) at 85.86 cents (U.S.), essentially unchanged from early

moindres que le yen. Depuis le début de septembre, la livre sterling et le mark allemand ont augmenté de quelque 4 % par rapport au dollar É.-U. L'entrée de la livre dans le mécanisme européen des taux de change a renforcé cette devise, car on s'attend à ce que sa valeur future bénéficie du lien officiel avec le mark allemand. Étant donné le statut d'exportateur de pétrole dont jouit l'Angleterre, la hausse des prix du pétrole a également apporté un soutien à la livre. Dans le cas du mark, le marché semble avoir été réconforté par les déclarations de la Bundesbank qui a assuré que ni l'escalade des prix du pétrole ni les efforts déployés pour revigorer l'économie de l'Allemagne de l'Est n'entraîneront de concession au plan de la stabilité des prix.

### L'évolution financière au Canada

Après avoir connu une série de baisses qui ont totalisé environ un point et demi de pourcentage au cours de l'été, les taux à court terme canadiens se sont stabilisés depuis la mi-septembre à des niveaux voisins de ceux du début de l'année. En réaction à la baisse des taux du marché, les taux préférentiels ont été ramenés le 20 septembre à 13 3/4 %; c'était la deuxième fois en un mois qu'ils faisaient l'objet d'une réduction de 1/2 point de pourcentage. Les taux hypothécaires sont tombés au niveau habituel de 13 1/4 % pour des échéances de un à cinq ans, en baisse de 1/4 à 1/2 point par rapport aux niveaux du début de septembre.

Si l'on utilise les taux du papier commercial à trois mois comme taux de référence, on observe que l'écart entre les taux canadiens et américains est passé, au cours des six dernières semaines, d'environ 4 1/2 points à 4 1/4 points. Cette réduction résulte d'une baisse d'environ 1/8 de point enregistrée par les taux canadiens au début de la période et d'une hausse d'ampleur équivalente des taux américains.

La stabilité récente des taux intérieurs à court terme contribue à la vigueur générale du dollar canadien qui, après avoir coté le 23 août 88,59 cents É.-U., son plus haut niveau depuis douze ans, est tombé à moins de 86 cents É.-U. au début de septembre. Cette baisse tenait en partie aux attentes d'un relâchement encore plus marqué des taux d'intérêt canadiens. Comme ces attentes se sont évanouies et que le renchérissement du pétrole a amélioré quelque peu les termes de l'échange du Canada, qui est un exportateur net d'énergie, le dollar a de nouveau dépassé la barre des 87 cents É.-U. au début d'octobre. Après le nouveau recul enregistré ces derniers jours, à la suite notamment d'opérations effectuées par des investisseurs étrangers sur des titres libellés en dollars canadiens, le dollar se négocie maintenant à 85,86 cents É.-U. (cours du 17 octobre à midi), soit pratiquement le niveau du début de septembre. Quant

September. On a trade-weighted basis, the dollar is down about 1 per cent, reflecting the relative strength of other major currencies against the U.S. dollar.

In contrast to the limited movement in short-term rates, Canadian long-term interest rates have increased by more than 1/2 of a percentage point since early September, and the spread over comparable U.S. rates has widened by about the same amount to 2 1/2 percentage points. This widening occurred primarily in the second half of September, when the domestic market was facing a heavy supply of new financing during a period of rising U.S. long-term rates. Since then, domestic rates have moved more or less in parallel with those in the United States. The current spread is in the same range as the differentials of last spring which peaked in April at 2 3/4 percentage points.

The growth in monetary aggregates has continued at the moderate pace evident over most of 1990. The growth rate of M2 for the third quarter was 6 per cent, little changed from the first half of the year and down from 14 per cent in 1989.

Total business credit also increased at a 6 per cent annual rate during the third quarter, down from 8 per cent in the first half. This deceleration reflected reduced growth in short-term credit borrowings and continued weakness in new bond and equity issues.

Household credit has been expanding at progressively lower rates over the year. After growth rates of 16 per cent in the first quarter and 11 per cent in the second, the available data suggest growth closer to 5 per cent for the third quarter. In recent months, mortgage lending at the banks has been expanding at around this rate, the lowest in six years.

au cours du dollar pondéré selon les échanges internationaux, il a baissé d'environ 1 % par suite de la fermeté des autres grandes devises par rapport au dollar É.-U.

Contrairement aux taux à court terme, dont les fluctuations ont été limitées, les taux à long terme canadiens se sont accrus de plus de 1/2 point depuis le début de septembre, et l'écart par rapport aux taux américains comparables a augmenté dans des proportions analogues pour se chiffrer à 2 1/2 points. Cela s'est produit principalement durant la seconde quinzaine de septembre, où l'offre de nouvelles émissions était forte sur le marché intérieur et où les taux à long terme étaient à la hausse aux États-Unis. Depuis, les taux canadiens et américains ont évolué de façon plus ou moins parallèle. L'écart actuel est maintenant du même ordre que ceux du printemps dernier : il était de 2 3/4 points en avril.

La croissance des agrégats monétaires s'est poursuivie au rythme modéré observé pendant la plus grande partie de l'année. La progression de M2 au troisième trimestre a été de 6 %; cela représente une très légère variation par rapport au premier semestre, mais une chute par rapport au taux de 14 % enregistré en 1989.

L'ensemble des crédits aux entreprises a augmenté au troisième trimestre à un taux annuel de 6 %, contre 8 % au premier semestre. Cette décélération reflète un ralentissement de la progression des emprunts à court terme et la faiblesse persistante des nouvelles émissions d'obligations et d'actions.

Le crédit aux ménages s'accroît à un rythme qui diminue progressivement depuis le début de l'année. En effet, le taux de croissance de cet agrégat a été de 16 % au premier trimestre, puis de 11 % au second, et les données actuelles indiquent une progression de près de 5 % pour le troisième trimestre. Ces derniers mois, les prêts hypothécaires consentis par les banques ont augmenté à un rythme à peu près égal à ce dernier taux, le plus bas enregistré depuis 6 ans.

## Record of press releases

## Communiqués reproduits à titre documentaire

*Major press statements issued by the Bank of Canada and selected other official releases of related interest are published below.*

*On trouvera sous cette rubrique certains communiqués importants publiés par la Banque du Canada ou par d'autres organismes officiels.*

Bank of Canada  
27 November 1990

### **Bank of Canada — New series issue \$100 bank note**

A new \$100 bank note, featuring anti-counterfeiting technology pioneered in Canada, will go into circulation December 3, 1990.

The newly designed bill, the second to be introduced by the Bank of Canada bearing an Optical Security Device, will gradually replace \$100 notes of previous series as they become worn and are withdrawn from circulation. Notes of all series can be used to make payments.

The Optical Security Device (OSD), a unique security feature introduced last year by the Bank of Canada on the new \$50 note, is a small square of ultrathin reflective film which appears on the face of the bill. The OSD changes colour from gold to green when tilted under light – an additional indication that the bank note is genuine.

Development of this technology by the Bank of Canada, the National Research Council of Canada and a number of private sector companies has put Canada in the forefront of bank note security worldwide.

The Bank of Canada is responsible for enhancing the security aspect of our currency to deter counterfeiting. Counterfeiting is not a problem in Canada and the security features of the new note will help to make sure that it will not be in the future.

Banque du Canada  
le 27 novembre 1990

### **La Banque du Canada émet un nouveau billet de 100 dollars**

Un nouveau billet de 100 dollars, dont les éléments de sûreté sont à la fine pointe de la technologie, sera mis en circulation par la Banque du Canada le 3 décembre 1990; ce sera le deuxième billet canadien doté d'une vignette de sûreté.

Ce billet remplacera graduellement ceux des anciennes séries à mesure qu'ils seront retirés de la circulation en raison de leur usure. Tant les anciens que les nouveaux billets pourront servir à effectuer des paiements.

Le nouveau billet est notamment doté d'une vignette de sûreté, élément de sécurité exclusif lancé l'an dernier par la Banque du Canada avec les billets de 50 dollars. La vignette de sûreté est un petit carré apparaissant au recto des billets. Elle est composée d'une couche ultramince d'un film réfléchissant qui passe de l'or au vert selon l'angle de vision. C'est un indice supplémentaire d'authenticité.

Mise au point par la Banque du Canada, le Conseil national de recherches du Canada et des sociétés privées, la vignette de sûreté place le Canada à l'avant-garde de la sécurité des billets de banque dans le monde entier.

La Banque du Canada a pour mandat de renforcer la sécurité des billets pour décourager la contrefaçon. Certes, il n'existe pas véritablement de problème de contrefaçon au Canada, mais les éléments de sécurité incorporés aux nouveaux billets contribueront à prévenir un problème éventuel.

La nouvelle série de billets que la Banque du Canada a lancée en 1986

With the introduction of a new series of bills in 1986, the Bank of Canada has incorporated a number of graphic features which enhance the security of the notes. These include microprinting, fine-line patterns and a rainbow of pastel colours that are difficult to reproduce. These features, along with the OSD on the new \$50 and \$100 bills, will provide Canadians with excellent protection for their bank notes.

In addition to the security features, the new bills are designed to assist blind and visually impaired persons to distinguish among note denominations and to facilitate more efficient use of high-speed note-processing machines.

The new \$100 bill features a portrait of Sir Robert Borden, Canada's eighth Prime Minister, while the back has an illustration of the Canada goose.

A \$100 bill has an average life expectancy of about seven years. There are approximately 71 million \$100 bills in circulation, with a face value of some \$7.1 billion.

\* \* \*

The Criminal Code prohibits the printing or publishing of anything in the likeness or appearance of all or part of a bank note.

Defacing Canadian bank notes is also unlawful and difficulties may be encountered in using defaced bank notes for payment. Damaged notes can be authenticated at the Bank of Canada.

Bank of Canada  
3 December 1990

### **Sheets of \$2 bank notes to be sold**

The sight of a crisp new bank note always attracts attention. Imagine what an uncut sheet of \$2 bills would do.

Starting December 5, 1990, you will be able to buy sheets of 40 - \$2 bills at Bank of Canada agencies across the country and through certain numismatic dealers. The price - \$90 plus applicable taxes.

In Newfoundland and Prince Edward Island sheets will be available from the main branch of the Canada Trust Company in St. John's and Charlottetown.

comprend un certain nombre d'éléments graphiques - micro-caractères, lignes multidirectionnelles et dégradés pastel - qui rendent plus difficile la reproduction de ces billets. Combinée à ces éléments de sécurité, la vignette de sûreté incorporée aux nouveaux billets de 50 dollars et de 100 dollars constitue pour les Canadiens une excellente protection contre les risques de contrefaçon.

Les billets de la nouvelle série ont été conçus de façon à aider les handicapés visuels à en distinguer les coupures et aussi à rendre plus efficace l'utilisation des trieuses mécaniques ultra-rapides.

Le recto du nouveau billet de 100 dollars porte l'effigie de Sir Robert Borden, huitième premier ministre du Canada. Le verso est orné d'une bernache canadienne.

Les billets de 100 dollars ont une durée de vie moyenne de sept ans. Environ 71 millions de billets de 100 dollars, représentant un montant total de quelque 7,1 milliards de dollars, sont actuellement en circulation.

\* \* \*

Le code criminel canadien interdit l'impression ou la publication en tout ou en partie des billets de banque et de tout ce qui a une ressemblance avec un billet de banque ou en a l'apparence.

Il est aussi illégal de défigurer les billets de banque canadiens, qui peuvent alors être difficiles à utiliser comme moyens de paiement. Les billets endommagés peuvent être authentifiés à la Banque du Canada.

Banque du Canada  
le 3 décembre 1990

### **Mise en vente de feuilles de billets de 2 dollars**

Si un billet de banque tout neuf attire toujours l'attention, imaginez l'effet d'une pleine feuille de billets de 2 dollars.

À partir du 5 décembre 1990, vous pourrez acheter des feuilles de 40 billets de 2 dollars aux Agences de la Banque du Canada et à certains comptoirs de numismatique. Le prix : 90 dollars plus les taxes applicables.

À Terre-Neuve et à l'Île-du-Prince-Édouard, les feuilles seront offertes par l'entremise de la succursale principale de la Société Canada Trust de St. John's et de Charlottetown.

Les feuilles se présentent en deux formats : cinq billets en largeur sur huit en

The sheets are available in two formats, 5 notes wide by 8 notes deep (measuring 76.2 cm x 55.88 cm) and 4 notes wide by 10 notes deep (measuring 60.96 cm x 69.85 cm). Each sheet will have been inspected, rolled and placed in a protective tube.

The sheets can also be ordered by mail – for delivery within Canada only – for an additional registered mail postage charge of \$8.25 per parcel. Because of insurance limitations, no parcel may contain more than one sheet of bank notes.

Mail orders should specify the format required and be directed to:

Bank Note Sheets  
Bank of Canada  
234 Wellington Street  
Ottawa, Ontario  
K1A 0G9

A money order or certified cheque must be included with each mail order.

If subsequently presented to the Bank of Canada, the sheets would be worth their face value of \$2 for each note or \$80.00 for a complete sheet.

\* \* \*

The Criminal Code of Canada prohibits the printing or publishing of anything in the likeness or appearance of all or part of a bank note.

hauteur (mesurant 76,2 cm sur 55,88 cm); et quatre billets en largeur sur dix en hauteur (mesurant 60,96 cm sur 69,85 cm). Chaque feuille sera inspectée, puis roulée et placée dans un tube protecteur. On peut aussi commander des billets pour livraison par la poste au Canada; les frais d'envoi par courrier recommandé sont alors de 8,25 dollars. En raison de la limite des responsabilités assumées par les assureurs, on ne peut envoyer qu'une seule feuille par tube.

Les commandes postales devront préciser le format désiré et être adressées à :

Feuilles de billets de banque  
Banque du Canada  
234, rue Wellington  
Ottawa (Ontario)  
K1A 0G9

Les commandes doivent être accompagnées d'un chèque certifié ou d'un mandat-poste.

Les feuilles de billets qui retourneront à la Banque seront acceptées à leur valeur nominale, soit 2 dollars le billet et 80 dollars la pleine feuille.

\* \* \*

Le code criminel du Canada interdit l'impression ou la publication en tout ou en partie des billets de banque et de tout ce qui a une ressemblance avec un billet de banque ou en a l'apparence.

## Symbols used in charts and tables

A arithmetic scale  
 L logarithmic scale  
 E estimated  
 P preliminary  
 R revised  
 N not available  
 C corrected

Owing to the rounding of figures, components may not always add to the totals shown. A horizontal rule in the body of the table indicates either a break in the series or that the earlier figures are available only at a more aggregated level.

## Abréviations utilisées dans les graphiques et les tableaux

A Échelle arithmétique  
 L Ordonnées logarithmiques  
 E Estimations  
 P Chiffres provisoires  
 R Chiffres révisés  
 N Chiffres non disponibles  
 C Chiffres corrigés

Du fait que les chiffres sont arrondis, l'addition des éléments d'un tableau ne correspond pas toujours exactement au total indiqué. Une ligne horizontale dans le corps d'un tableau indique soit qu'il y a une rupture dans une série, soit que les données des périodes antérieures n'existent que sous une forme plus agrégée.

# Monetary aggregates and fiscal policy

## Agrégats monétaires et politique budgétaire

### Monetary aggregates

#### Agrégats monétaires

Seasonally adjusted—monthly average of Wednesdays  
Données désaisonnalisées—Moyenne mensuelle des mercredis

M2 plus deposits at trust and mortgage loan companies, and deposits and shares at caisses populaires and credit unions (M2+)  
M2 plus les dépôts dans les sociétés de fiducie ou de prêt hypothécaire et les dépôts et parts sociales tenus dans les caisses populaires et les credit unions (M2+)

M2 plus non-personal fixed-term deposits of residents booked in Canada (M3)  
M2 plus les dépôts à terme fixe autres que ceux des particuliers et les dépôts en monnaies étrangères comptabilisés au Canada au nom des résidents (M3)

M1 plus personal savings deposits and non-personal notice deposits (M2)  
M1 plus les dépôts d'épargne des particuliers et les dépôts à préavis autres que ceux des particuliers (M2)

Currency and demand deposits (less private sector float) excluding Government of Canada deposits (M1)  
Monnaie et dépôts à vue, effets du secteur privé en cours de compensation et dépôts du gouvernement canadien exclus (M1)

### Government of Canada fiscal position

C6 Banques à charte : Répartition régionale du passif

C7 Banques à charte : Ventilation trimestrielle des prêts aux sociétés non financières et aux entreprises individuelles, par type de prêt et montant autorisé

C8 Banques à charte : Ventilation trimestrielle des prêts non hypothécaires

K13\* Répartition trimestrielle du passif-dépôts des banques à charte (Mai 1990)

C9 Quelques statistiques bancaires désaisonnalisées : Avoirs et engagements des banques à charte

C10 Banques à charte : Réserves-encaisse et réserves secondaires

C11 Banques à charte : Avoirs et engagements en monnaies étrangères

C12 Banques à charte : Avoirs et engagements en monnaies étrangères comptabilisés au Canada

C13 Banques à charte : Avoirs et engagements en dollars américains comptabilisés au Canada

K2\* Banques à charte : État consolidé des revenus et dépenses (Février 1990)

K3\* Banques à charte : État consolidé de l'avoir des actionnaires et des provisions pour éventualités (Février 1990)

## D. Autres institutions financières S 56

D1 Sociétés de fiducie ou de prêt hypothécaire (non compris les filiales hypothécaires des banques à charte)

D2 Sociétés de prêt hypothécaire liées aux banques à charte : Situation mensuelle (estimations)

- D3 Local credit unions and caisses populaires: Quarterly statement of estimated assets and liabilities
- K4\* Deposits with government savings institutions (February 1990)
- D4 Sales finance and consumer loan companies: Monthly statement of estimated assets and liabilities
- D5 Canadian investment transactions of sixteen life insurance companies
- K5\* Life insurance companies: Assets held in Canada (October 1990)
- D6 Investment dealers: Weekly report on inventories of securities
- D7 Investment funds: Quarterly statement of estimated assets and liabilities
- D8 Closed-end funds: Quarterly statement of estimated assets and liabilities
- K6\* Trusteed pension plans (December 1990)

### **E. Financial aggregates S 70**

- E1 Selected indicators of money and credit
- K7\* Monetary aggregates and credit measures (March 1990)
- E2 Consumer credit: Outstanding balances of selected holders
- E3 Residential mortgage credit: Outstanding balances of major private institutional lenders

### **F. Financial markets S 74**

- F1 Selected Canadian and international interest rates, including bond yields and interest arbitrage
- F2 Money market statistics
- F3 Estimated treasury bills and other short-term paper outstanding (excluding Government of Canada)
- F4 Stock market statistics: Canada and United States
- F5 Net new security issues placed in Canada and abroad
- F6 Net new security issues placed in Canada (includes foreign currency issues placed in Canada)
- F7 Net new security issues placed abroad (includes Canadian dollar issues placed in overseas markets)
- F8 Gross new bond issues and retirements: Government of Canada and provinces

- D3 Caisses populaires et credit unions locales : Situation trimestrielle (estimations)
- K4\* Dépôts dans les caisses d'épargne publiques (Février 1990)
- D4 Sociétés de financement ou de prêt à la consommation : Situation mensuelle (estimations)
- D5 Opérations d'investissement en dollars canadiens de seize compagnies d'assurance-vie
- K5\* Compagnies d'assurance-vie : Avoirs détenus au Canada (Octobre 1990)
- D6 Courtiers en valeurs mobilières : Relevé hebdomadaire des stocks de titres
- D7 Sociétés de placement : Situation trimestrielle (estimations)
- D8 Sociétés d'investissement à capital fixe : Situation trimestrielle (estimations)
- K6\* Caisses de retraite gérées en fiducie (Décembre 1990)

### **E. Agrégats financiers S 70**

- E1 Indicateurs de l'évolution de la masse monétaire et du crédit
- K7\* Agrégats monétaires et mesures du crédit (Mars 1990)
- E2 Encours du crédit à la consommation consenti par les principaux prêteurs
- E3 Crédit hypothécaire à l'habitation : Encours des principales catégories d'institutions prêteuses du secteur privé

### **F. Marchés financiers S 74**

- F1 Statistiques diverses sur le loyer de l'argent au Canada et à l'étranger, y compris le taux de rendement des obligations
- F2 Statistiques du marché monétaire
- F3 Estimations de l'encours des bons du Trésor et des autres effets à court terme (non compris les titres du gouvernement canadien)
- F4 Statistiques boursières : Canada et États-Unis
- F5 Émissions nettes de titres placés au Canada et à l'étranger
- F6 Émissions nettes de titres placés au Canada (y compris les titres libellés en monnaies étrangères placés au Canada)
- F7 Émissions nettes de titres placés à l'étranger (y compris les titres libellés en dollars canadiens placés sur les marchés d'outre-mer)
- F8 Émissions brutes d'obligations et remboursements : Gouvernement canadien et provinces

- F9 Gross new bond issues and retirements: Municipalities
- F10 Gross new issues and retirements: Corporations, other institutions and foreign debtors
- F11 Net new issues of securities by financial and non-financial corporations
- K8\* Bonds outstanding: Government of Canada, provincial, municipal, corporate and other bonds (October 1990)
- K9\* Net new issues of corporate securities: Industrial classification (October 1990)

## G. Government of Canada S 87

- G1 Government of Canada fiscal position
